Subject: comments re general plan

Aloha: Both my husband and I reside in Umauma on the Hamakua coast. We have been attending meetings and followup sessions for the last seven (7) years.

Our feedback is as follows in areas that need to be addressed in this plan:

Feral pigs are a real hardship for farmers

Albezia along our back roads continue to spread, increasing costs for the county road maintenance and electrical companies. It seems to be much more cost effective to remove the albezia tress from infrastructure easmens, rather than repairing the damage from them falling down.

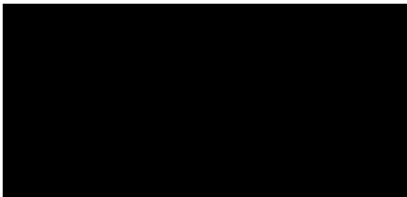

Increase access to clean well water rather than catchment is critical now that we know RLWD can be in the water.

Little fire vouchers really stimulated community action This should be a reglar thing with new pests. For example the new queensland longhorn beetle could be devastating - the couny should kick in funds to help stimulate research.

Action should be addressed to reopen Kolekole and Hakalau Beach Parks on the East Side. Both have been closed for several years new.

We would be happy to discuss our concerns with you in person or via email.

Mahalo for all your good work
