Subject: **Element Environmental, LLC's Statement of Qualifications in Response to the Department of Parks and Recreation, County of Hawaii's Notice to Providers of Professional Services, Fiscal Year 2024-25**

Dear Mr. Messina,

Element Environmental, LLC (E2) is pleased to submit our Statement of Qualifications (SOQ) to the County of Hawaii, Department of Parks and Recreation per the "Notice to Providers of Professional Services" solicitation notice for the fiscal year 2024 to 2025.

This serves as our **expression of interest** in providing services for **PR.2) Industrial Hygiene (Hazardous Materials Survey, Assessment & Planning)**. In accordance with the notice, we have enclosed our completed Federal Form 330 (SFR330) which includes the following:

- (1) The name of our firm, contact information, and principal place of business;
- (2) The age of our firm and its average number of employees over the past five years;
- (3) The education, training, and qualifications of our key employees;
- (4) A list of recent projects and the names of five clients who may be contacted, including two for whom services were rendered during the preceding year; and
- (5) Promotional/descriptive literature.

Please call me on my cellular phone number (808) 864-3952 or email [ryamauchi@e2hi.com](mailto:ryamauchi@e2hi.com) should you have any questions regarding this submittal.

Sincerely,

Ryan S.W. Yamauchi, P.E.  
President

**18. RELEVANT PROJECTS**

(1) TITLE AND LOCATION (City and State) <b>Kaneohe Bay No. 2 Wastewater Pump Station Force Main Improvements, Kaneohe, Oahu, Hawaii</b>	(2) YEAR COMPLETED	
	PROFESSIONAL SERVICES 2017	CONSTRUCTION N/A

a. (3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE Design alternatives analysis for the replacement of the existing 14-inch force main. Alternatives analyzed included horizontal directional drilling, pilot tube microtunneling, and open-cut trenching the new alignment across an existing waterway. Completed design drawings and specifications for the selected alternative, horizontal directional drilling. Prepared the Engineering Design Alternatives Report, completed design calculations for the pumps and force main design, prepared design drawings and specifications, and other necessary permit documents. <b>Fee:</b> \$520,000. <b>Role:</b> Project Manager/Principal Engineer.	<input checked="" type="checkbox"/> Check if project performed with current firm	
--	--	--

(1) TITLE AND LOCATION (City and State) <b>Reconstruction/Replacement of Sewers, Ho'omaluhia Botanical Gardens, Kaneohe, Oahu, Hawaii</b>	(2) YEAR COMPLETED	
	PROFESSIONAL SERVICES Estimated 2024	CONSTRUCTION Estimated 2024

b. (3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 completed planning, design, and preparation of construction documents for the reconstruction/replacement of existing sewer lines. Phase I included the cleaning and CCTV inspections in accordance with the Pipeline Assessment Certification Program. Phase II assessed the sewer line deficiencies from the CCTV data, developed rehabilitation/replacement alternatives for the system, prepared schematic and concept drawings for the recommended alternatives, and prepared a cost estimate for the recommended improvements. E2 will prepare construction documents for Phase III. <b>Fee:</b> \$840,000. <b>Role:</b> Program Manager/Principal Engineer.	<input checked="" type="checkbox"/> Check if project performed with current firm	
--	--	--

(1) TITLE AND LOCATION (City and State) <b>Sewer Condition Analysis Dieldrin Study, Oahu, Hawaii</b>	(2) YEAR COMPLETED	
	PROFESSIONAL SERVICES Ongoing	CONSTRUCTION N/A

c. (3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 is conducting sewer condition evaluations, developing wastewater, surface water, solids and soil sampling and testing plans, collecting and analyzing samples, performing analysis of data, and reporting on the results. E2 is developing recommendations for sewer improvements, identifying priority sewers for reduction of infiltration and inflow, developing reports to address State and Federal permit requirements, and assisting with the scoping of wastewater capital improvement projects. <b>Fee:</b> \$339,517. <b>Role:</b> Program/Manager/Principal Engineer.	<input checked="" type="checkbox"/> Check if project performed with current firm	
---	--	--

(1) TITLE AND LOCATION (City and State) <b>Surveying Small-Scale Waste to Energy Conversion Opportunity Considering Strategic DoD Locations in Hawaii, Hawaii</b>	(2) YEAR COMPLETED	
	PROFESSIONAL SERVICES 2023	CONSTRUCTION (if applicable) N/A

d. (3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 gathered non-hazardous solid waste data from various installations and evaluated the waste composition to determine the amount of feedstock that could be used in a Small-Scale WTE unit. Costs were compared to the projected cost avoidance of landfill tipping fees due to solid waste reduction. Recommendations made for further evaluation of DoD facilities that generate enough waste to support small-scale WTE technologies and where costs were close to or under the estimated cost avoidance. <b>Fee:</b> \$102K. <b>Role:</b> Principal Engineer.	<input checked="" type="checkbox"/> Check if project performed with current firm	
--	--	--

<b>17. OTHER PROFESSIONAL QUALIFICATIONS (Publications, Organizations, Training, Awards, etc.)</b>					
OSHA 40-hour HAZWOPER Training		40-hour Construction Safety Hazard Awareness Training			
OSHA 8-hour HAZWOPER Refresher Training		for Contractors			
OSHA 30-hour Construction Safety and Health Training		Hazardous Waste Site Supervisor Training			
Confined Space Training		Bloodborne Pathogens, First Aid, CPR, and AED Training			
<b>18. RELEVANT PROJECTS</b>					
	<b>(1) TITLE AND LOCATION (City and State)</b> <b>Site Investigation for Abandoned AVGAS/MOGAS Pipeline, Pearl City Peninsula, Joint Base Pearl Harbor-Hickam (JBPHH), Oahu, Hawaii</b>		<b>(2) YEAR COMPLETED</b>		
			PROFESSIONAL SERVICES 2016	CONSTRUCTION N/A	
<b>a.</b>	<b>(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE</b> <input checked="" type="checkbox"/> Check if project performed with current firm E2 conducted a Site Investigation (SI) for the abandoned aviation gasoline (AVGAS) and motor gasoline (MOGAS) pipeline running from the former Pearl City Fuel Annex to the waterfront fueling and cargo wharves on Pearl City Peninsula within JBPHH. The objectives of the project were to delineate and characterize the nature and extent of contamination in the soil, groundwater, and soil gas caused by historic releases of AVGAS/MOGAS; to conduct an environmental hazard evaluation; and to provide a basis for developing effective remedial measures and response actions for the area. <b>Fee:</b> \$375,000. <b>Role:</b> Project Manager/Senior Environmental Engineer.				
	<b>(1) TITLE AND LOCATION (City and State)</b> <b>Stormwater Drainage System Survey, JBPHH, and Outlying Areas, Oahu, Hawaii</b>		<b>(2) YEAR COMPLETED</b>		
			PROFESSIONAL SERVICES 2016	CONSTRUCTION N/A	
<b>b.</b>	<b>(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE</b> <input checked="" type="checkbox"/> Check if project performed with current firm E2 created an integrated, scaled, and detailed stormwater drainage map and database for all areas of JBPHH. The maps and results of the survey was used to determine areas in need of repairs or cleaning. The project included a survey and condition assessment of all stormwater drain features; and in specified situations, sediment sampling and analysis, to create a detailed base-wide stormwater drainage map and database. <b>Fee:</b> \$1,799,119. <b>Role:</b> Project Manager.				
	<b>(1) TITLE AND LOCATION (City and State)</b> <b>Feasibility Study, Proposed Plan, and Record of Decision for the Open Area Near Building 992, Pearl City Peninsula, JBPHH, Oahu, Hawaii</b>		<b>(2) YEAR COMPLETED</b>		
			PROFESSIONAL SERVICES 2016	CONSTRUCTION N/A	
<b>c.</b>	<b>(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE</b> <input checked="" type="checkbox"/> Check if project performed with current firm E2 conducted a Feasibility Study (FS), Proposed Plan (PP) and Record of Decision (ROD) that would lead to long-term management of the site to control the exposure of contaminants. While scoping the FS, E2 was able to facilitate discussions between the Navy and the regulators, the U.S. Environmental Protection Agency (EPA) Region IX and the State of Hawaii, Department of Health (DOH) Hazard Evaluation and Emergency Response (HEER) Office; to obtain Site closure with No Further Action (NFA). E2 developed the PP and ROD decision documents, as required by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), to close the Open Area Near Building 992. The project also included procuring the venue, running announcements in the newspaper, and preparing the presentation for the public meeting presenting the PP to the public. <b>Fee:</b> \$174,256. <b>Role:</b> Project Manager/Senior Environmental Engineer.				
	<b>(1) TITLE AND LOCATION (City and State)</b> <b>Kalewa Wastewater Pump Station Improvements Design Honolulu, Oahu, Hawaii</b>		<b>(2) YEAR COMPLETED</b>		
			PROFESSIONAL SERVICES 2018	CONSTRUCTION N/A	
<b>d.</b>	<b>(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE</b> <input checked="" type="checkbox"/> Check if project performed with current firm E2 completed an engineering design of a new packaged wastewater pump station and new dual relief force main for the Kalewa Street wastewater pump station. Evaluated present and future wastewater flows from the tributary, sized and selected the new packaged pump station, and completed construction documents for the new packaged wastewater pump station and new dual relief force main. Integral to the design was planning the phasing of construction, which would allow continued and uninterrupted use of the airport facilities by the tenants during construction. <b>Fee:</b> \$52,000. <b>Role:</b> Senior Environmental Engineer.

	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
	<b>Environmental Assessments, Technical Studies, SMA Use Permit Kawailoa Transfer Station, Hawaii &amp; EA/TS for Leeward Baseyard and Convenience Center Improvements, Hawaii</b>	2020	N/A
a.	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 provided planning and permitting services to obtain government permission for the development of multiple properties located across Oahu, Hawaii. The development of the sites required permits and approvals from the City and County of Honolulu (CCH), Department of Planning and Permitting, including Environmental Assessments for two project sites and the preparation of a Special Management Area use permit application for the CCH Department of Environmental Services, Refuse Division. In addition, E2 prepared a Hydrogeological Survey for the Leeward Baseyard and Convenience Center Improvements. <b>Fee:</b> \$825,893. <b>Role:</b> Senior Geologist.		
	<b>Environmental Site Assessments, Kapalama Container Terminal Yard Project, Honolulu Harbor, Oahu, Hawaii</b>	2015	2024
b.	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Characterized the site to provide consistent and effective management practices and to mitigate potential human health and environmental hazards associated with direct exposure to contaminants of potential concern in soil, groundwater, concrete, sediment, and soil gas during proposed construction/dredging activities required for the redevelopment of the site as a container terminal yard. Identified historic land use, reviewed previous construction and environmental work, project design and planning, environmental sampling, data management and evaluation, and report preparation. <b>Fee:</b> \$500,000. <b>Role:</b> Senior Geologist. <b>*2023 ACECH ENGINEERING EXCELLENCE AWARD*</b>		
	<b>Environmental Conditions of Property, Various Sites, Guam</b>	2022	N/A
c.	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Gathered and analyzed data and information to classify the property into several ECP types. Reviewed historical records, identified historic land use associated with hazardous materials and wastes, and reviewed regulatory files, environmental reports, and permits, conducted a visual site inspection, oversaw data management and evaluation, report prepared. <b>Fee:</b> \$256,062. <b>Role:</b> Project Manager/Senior Geologist.		
	<b>Preparation of Applications for WQC 401 and 404, Kalaeloa Barbers Point Harbor, Oahu, Hawaii</b>	2012	N/A
d.	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Prepared the Section 401 WQC application that described the project, existing environment, and potential environmental effects, chemical and biological, from proposed activities and included information regarding the owner, general contractor, project site, and receiving state water. <b>Fee:</b> \$23,822. <b>Role:</b> Project Manager/Senior Geologist.

	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
a.	<b>Non-Domestic Wastewater Management Plan, JBPHH, Oahu, Hawaii</b>	Ongoing	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 evaluated NAVFAC Hawaii's 8,000+ facilities to identify, characterize, and quantify non-domestic wastewater discharges to the sanitary sewer system tributary to the NAVFAC Hawaii Wastewater Treatment Plant (WWTP). Coordinated site visits to and conducted interviews with facility managers of over 750 facilities. The inventory of non-domestic wastewater sources collected in this study will be used to determine additional non-domestic discharges that should be internally permitted and regulated. The project also includes quarterly wastewater sampling efforts to collect both grab and 24-hour composite samples from WWTP influent locations on the Hickam Field flight line and Pearl Harbor, as well as effluent samples from the WWTP. <b>Fee:</b> \$1,154,918. <b>Role:</b> Assistant Project Manager/Senior Environmental Engineer.		
b.	<b>Navy Spill Prevention Control and Countermeasure Plan Update, JBPHH, Oahu, Hawaii</b>	2023	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 completed an update of the Navy SPCC Plan in accordance with 40 CFR 112 regulating ASTs storing petroleum and cooking oil products. E2 inspected 521 ASTs and bulk oil storage areas at all Naval installations on Oahu. Worked closely with NAVFAC personnel to update the inventory, condition, and management of Navy ASTs and subsequently generated an updated SPCC Plan. Developed AST inspection forms and maintained a database of AST inspection data collected. <b>Fee:</b> \$487,580. <b>Role:</b> Senior Environmental Engineer.		
c.	<b>Waianae Agricultural Park Improvements, Waianae, Oahu, Hawaii</b>	2017	2018
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Completed the design of miscellaneous improvements to the drainage system at the Waianae Agricultural Park. The improvements included slope stabilization of drainage ways, diversion of runoff into an infiltration basin, design of overflow protection drainage intakes for the infiltration basin, and repairs to existing concrete drainage swales. Responsible for preparation of construction documents (i.e., plans and specifications) and services during bidding and construction. The construction plans were completed on an accelerated schedule to meet the funding requirements for construction. <b>Fee:</b> \$60,000. <b>Role:</b> Senior Environmental Engineer.		
d.	<b>Reservoirs 155 and 255 Capacity Study, Kunia, Oahu, Hawaii</b>	2010	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Conducted a study concerning the repair, maintenance, and capacity options for Reservoirs 155 and 225 of the Waiahole Ditch Irrigation System for the Agribusiness Development Corporation. <b>Fee:</b> \$30,000. <b>Role:</b> Senior Environmental Engineer.

18. RELEVANT PROJECTS			
	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
a.	<b>Illicit Discharge Survey, Commander Navy Region Hawaii, JBPHH, Oahu, Hawaii</b>	2016	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Completed an illicit discharge survey for non-stormwater discharges to the CNRH's municipal separate storm sewer system (MS4) and waters of the U.S. in accordance with the NPDES permit issued. Inspected over 1,300 facilities, developed recommendations for possible corrections, and prepared the associated preliminary cost estimates. <b>Fee:</b> \$393,019. <b>Role:</b> Senior Environmental Engineer.		
b.	<b>Waianae Agricultural Park Improvements, Waianae, Oahu, Hawaii</b>	2017	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Completed the design of miscellaneous improvements to the drainage system at the Waianae Agricultural Park. The improvements included slope stabilization of drainage ways, diversion of runoff into an infiltration basin, design of overflow protection drainage intakes for the infiltration basin, and repairs to existing concrete drainage swales. Responsible for preparation of construction documents (i.e., plans and specifications) and services during bidding and construction. The construction plans were completed on an accelerated schedule to meet the funding requirements for construction. <b>Fee:</b> \$60,000. <b>Role:</b> Senior Environmental Engineer.		
c.	<b>Waimanalo Wastewater Treatment Plant Effluent Reuse Feasibility Study, Waimanalo, Oahu, Hawaii</b>	2014	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Conducted a study to assess the technical, environmental, and economic feasibility of wastewater effluent reuse from the Waimanalo Wastewater Treatment Plant. Responsible for the identification of potential users and locations, including the reuse demand, and transmission and storage requirements. Tasks included public outreach, data collection, research of prior studies, and evaluation of costs. Prepared a conceptual layout and cost estimate for the preferred WWTP upgrades and transmission and storage requirements for users with strong interest in reuse. <b>Fee:</b> \$219,345. <b>Role:</b> Senior Environmental Engineer.		
d.	<b>Navy Region Hawaii Stormwater Management Plan, JBPHH, Oahu, Hawaii</b>	2016	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm 2 prepared a SWMP for Navy Region Hawaii in accordance with their NPDES permit. The SWMP contained several program components including public education and outreach; illicit discharge detection and elimination; construction site runoff control; post-construction stormwater management; P2 and good housekeeping; stormwater monitoring; and reporting. Developed Stormwater Pollution Control Plans (SWPCPs) for 25 industrial facilities. Responsibilities included conducting facility inspections and interviews, coordination with client and facility managers, and preparing the document for submittal. <b>Fee:</b> \$291,000. <b>Role:</b> Environmental Engineer.

	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
a.	<b>Master Plan for Marine Corps Base Hawaii Sanitary Landfill, Kaneohe, Oahu, Hawaii</b>	2017	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm Prepared the Master Plan for the Marine Corps Base (MCB) Hawaii Landfill to fulfill the requirements of their Solid Waste Management Permit. The Master Plan is comprised of three parts: the Landfill Implementation Plan (LIP), the Operations Plan, and the Closure/Post-Closure Plan. The LIP involves evaluating the Final Grading Plan and making revisions as needed, providing a 20-year fill sequencing plan, and Basis of Design (BOD). The Operations Plan has been written to help facilitate the MCB Hawaii Landfill staff to comply with the Landfill's current permit and to operate efficiently. The Closure/Post-Closure Plans details landfill closure procedures in accordance with State and Federal regulations. <b>Fee:</b> \$143,975. <b>Role:</b> Senior Environmental Engineer.		
b.	<b>Landfill Optimization Study for Marine Corps Base Hawaii, Kaneohe, Oahu, Hawaii</b>	2017	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 prepared a Landfill Optimization Study (LOS) for the Marine Corps Base (MCB) Hawaii to evaluate their MCB Hawaii Sanitary Landfill. The purpose of the LOS was to: (1) evaluate landfill operations, equipment requirements, and personnel and to make recommendations as to how the overall operations of the landfill can be optimized; (2) conduct a waste evaluation study to evaluate and optimize waste pickups on base and (3) conduct an alternatives assessment that evaluated keeping the landfill open and operating as is, keeping the landfill open and implementing the LOS recommendations, and closure of the landfill. A detailed cost analysis was conducted for each of the alternatives and E2 provided recommendations to the MCB Hawaii based on the findings of the study. <b>Fee:</b> \$149,025. <b>Role:</b> Assistant Project Manager/Senior Environmental Engineer.		
d.	<b>Landfill Consulting Services for Two Closed Landfills Island of Hawaii, Hawaii</b>	2016	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 provided various consulting services at two closed landfills, including performing a geophysical survey, infrared photography, and mapping to determine landfill boundaries and fire characterization, and preparing a landfill fire management plan. Prepared a landfill alternative plan to evaluate fire control/extinction, waste mining, and other alternatives. Assisted with an U.S. Environmental Protection Agency (EPA)-supported fire control pilot test to evaluate the efficacy of using waste excavation and the application of foam/water as a method to extinguish fire in landfill hot spots. Tasks included quarterly monitoring of landfill gas and subsurface fire conditions, preparation of quarterly and annual monitoring reports, and periodic fire management activities (i.e., carbon dioxide [CO2] injection, landfill cover maintenance, and landfill fire response, etc.). <b>Fee:</b> \$389,000. <b>Role:</b> Senior Environmental Engineer.

	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
a.	<b>Lead in Drinking Water Testing at Priority Areas JBPHH/NCTAMS, Wahiawa, Oahu, Hawaii</b>	2020	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 conducted drinking water testing for Lead in Priority Areas as part of protective measures in place for children at various schools/childcare facilities on Navy Installations. Conducted 2-step sampling, developed under directives from Navy and EPA guidelines, submitted the samples for laboratory analysis, and prepared notifications. Conducted multiple site visits to each facility to prepare and then to sample over 700 drinking water outlets. <b>Fee:</b> \$99,595. <b>Role:</b> Senior Civil Engineer.		
b.	<b>CCH: Reconstruction/Replacement of Sewers, Ho‘omaluhia Botanical Gardens, Kaneohe, Oahu, Hawaii</b>	Ongoing	Est. 2024
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 completed planning, design, and preparation of construction documents for the reconstruction/replacement of existing sewer lines. Phase I included the cleaning and CCTV inspections in accordance with the Pipeline Assessment Certification Program. Phase II assessed the sewer line deficiencies from the CCTV data, developed rehabilitation/replacement alternatives for the system, prepared schematic and concept drawings for the recommended alternatives, and prepared a cost estimate for the recommended improvements. E2 will prepare construction documents for Phase III. <b>Fee:</b> \$840,000. <b>Role:</b> Assistant Project Manager/ Senior Civil Engineer.		
c.	<b>Ozone-Depleting Substances (ODS) Inventory and Management Plan for Naval Air Facility Atsugi (NAFA), Atsugi, Japan</b>	Ongoing	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 updated the air source inventory to include all Ozone-Depleting Substances (ODS) containing units regulated by the Japan Environmental Governing Standard (JEGS) and air emission sources (except ODS) that are regulated by the JEGS. E2 verified over 2,400 refrigerant and air emission sources at almost 230 facilities (70 facilities were added to the initial scope of work) at the site. E2 prepared an updated air source inventory database and maps of survey results, which were included in a Fieldwork Summary Report. The fieldwork findings were then used to update the ODS Management Plan (title changed to “Refrigerant Management Plan [RMP]”) to reflect revisions to applicable regulations. <b>Fee:</b> \$198,814. <b>Role:</b> Senior Civil Engineer.		
d.	<b>Pacific Missile Range Facility Biosolids Handling and Disposal Plan Kekaha, Kauai, Hawaii</b>	2023	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE <input checked="" type="checkbox"/> Check if project performed with current firm E2 conducted a site investigation and sampling at the Pacific Missile Range Facility (PMRF), Kekaha, Kauai, Hawaii. The study included various components of the wastewater treatment systems throughout the Base, with a focus on the existing wastewater treatment plant (WWTP), individual wastewater system (IWS) facilities, sludge drying beds, and the wastewater oxidation pond (WOP). E2 evaluated the current biosolids handling practices and will develop a long-term plan for the proper treatment and disposal of biosolids at PMRF, including IWS septage, WWTP, and WOP sludge. <b>Fee:</b> \$128,895. <b>Role:</b> Senior Civil Engineer.

	(1) TITLE AND LOCATION (City and State)	(2) YEAR COMPLETED	
		PROFESSIONAL SERVICES	CONSTRUCTION
a.	<b>Closure Activities and Removal of Under, and In-Ground Structure at Former JN Chevrolet Location, Haleiwa, Oahu, Hawaii</b>	2021	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 previously completed a Limited Phase II ESA as part of the due diligence process to detect any environmental issues for property acquisition in 2017. Areas of concern were recommended for additional sampling to evaluate the nature and extent of contamination. Fieldwork included discrete soil sampling and groundwater sampling from the UST excavation. Responsibilities for this project included groundwater sampling. <b>Fee:</b> \$57,1910. <b>Role:</b> Environmental Engineer.		
b.	<b>Asbestos and Lead Paint Survey for Singapore Area Coordinator, Sembawang, Singapore</b>	2024	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 conducted an asbestos-containing material (ACM) survey and lead-based paint (LBP) inspection including an LBP risk assessment (LRA) of deteriorated paint and bare soil at unaccompanied housing facilities and lead dust at lodging units in Sembawang, Singapore. Responsibilities included sampling for ACM and LBP, thoroughly documenting all fieldwork activities with notes and photography, and preparing computer aided design (CAD) drawings. <b>Fee:</b> \$1,858,355. <b>Role:</b> Environmental Engineer.		
c.	<b>Asbestos Survey, Naval Base Guam</b>	2020	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 completed an asbestos survey of 109 buildings with a total survey area of 1,014,904 square feet at NBG for the NAVFAC Pacific. E2 prepared a Work Plan and Health and Safety Plan prior to fieldwork. A total of 7,134 bulk samples were collected by a team of 4 inspectors, over four mobilizations within a year. E2 prepared Draft and Final survey reports that included a summary table of findings, plans with approximate locations of samples taken, extent of most homogeneous areas (HAs), a closeup and panoramic photo log of samples, and laboratory reports. Responsibilities included preparation of the WP and HSP, fieldwork coordination, fieldwork, and preparation of the Draft and Final Survey Reports. <b>Fee:</b> \$1,065,234. <b>Role:</b> Environmental Engineer.		
d.	<b>Operation and Maintenance and Monitoring for Multiple Sites, JBPHH, Oahu, Hawaii</b>	2013-2017	N/A
	(3) BRIEF DESCRIPTION (Brief scope, size, cost, etc.) AND SPECIFIC ROLE E2 completed four years of Operation and Maintenance (O&M) of two oily waste collection and treatment facilities within the PHNSY. E2 has managed hazardous and oily wastes recovered from two product recovery systems installed at the Building 8 and Oscar 2 Pier former release sites. The Building 8 system includes three Fuel Oil Skimmer System (FOSS) units while the Oscar 2 Pier consists of five FOSS units. E2 conducted weekly, monthly, and quarterly inspections and maintenance in order to keep both product recovery systems up and running efficiently. E2 completed system repairs, oily product gauging of over 100 wells, fuel profile sampling, NPDES compliance sampling, disposal of recovered product, and system trouble-shooting. <b>Fee:</b> \$431,080. <b>Role:</b> Environmental Engineer.

---	--	---

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT (*Include scope, size, and cost*)**

**Project Scope:** Element Environmental, LLC (E2) conducted a Phase I Environmental Due Diligence Audit (EDDA) and Phase II Confirmatory Sampling (CS) for an 84-acre portion of the Former Voice of America site located in Maili, Oahu. The Phase I EDDA and Phase II CS were completed in accordance with the Civilian Federal Agency Task Force's (CFATF) Guide on Evaluating Environmental Liability for Property Transfers (August 1998) in support of a transfer of the property to the State of Hawaii.

In support of the Phase I EDDA, E2 conducted a site visit, performed research on the site history, searched regulatory databases, interviewed site managers, and contracted an archeological firm to perform a cultural inventory survey. In support of the Phase II CS, E2 prepared a Project Work Plan and conducted field sampling to investigate potential polychlorinated biphenyls (PCBs), metals, asbestos, and petroleum hydrocarbon contamination related to the historic use of the site.

The field sampling effort consisted of various sampling techniques for multiple sample media. A *Multi Increment* (MI) sampling approach was utilized to assess the nature and extent of PCBs and metals contamination for the majority of the 84-acre project site. A separate MI sampling approach was utilized to assess the nature and extent of PCBs, metals, asbestos, and petroleum hydrocarbon contamination in a two-acre portion of the facility. Six groundwater wells were also installed surrounding this area; and groundwater samples were collected and analyzed for PCBs; metals; petroleum hydrocarbons; benzene, toluene, ethylbenzene, and xylenes (BTEX); methyl tert-butyl ether (MTBE); polynuclear aromatic hydrocarbons (PAHs); and halogenated volatile organic compounds (HVOCs).

In addition, over 100 discrete soil samples were collected to evaluate the lateral and vertical extent of known PCB contamination at two previously identified locations. E2 operated a field laboratory to reduce the number of off-site PCB analysis and to reduce the turn-around-time for analytical results. Ten percent of the PCB samples were analyzed by an off-site laboratory to verify the results of E2's field laboratory. Based on the elevated PCB soil sample results and at the request of the USEPA Region 9,

**Project Highlights:**

Conducted a Phase I EDDA.

Conducted a Phase II CS

MI soil sampling for PCBs and metals throughout 82 acres of the site.

MI soil sampling for PCBs, metals, asbestos, and petroleum hydrocarbons throughout 2 acres of the site.

Installation of six groundwater monitoring wells and collection of groundwater samples for PCBs, metals, petroleum hydrocarbons, BTEX, MTBE, PAHs, and HVOCs.

Discrete surface and subsurface soil sampling for PCBs at two previously identified locations of PCB contamination

MI sampling of concrete building foundation for PCBs

Operation of a field laboratory to reduce the number of off-site PCB analysis and time to obtain analytical results.

Prepared a Groundwater Monitoring Plan for the site.

Conducted remediation of 5 acres

**ESA Cost: \$289,550, and RA Cost: \$206,121**

**F. EXAMPLE PROJECTS THAT BEST ILLUSTRATE E2'S QUALIFICATIONS FOR THIS SERVICE CATEGORY (1)**

19. TITLE AND LOCATION <i>(City and State)</i> <b>Phase I and Phase II Environmental Site Assessments, and Removal Action – Remediation of 5 Acres, Former Voice of America Site, Maili, Oahu, Hawaii</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2019</b>	CONSTRUCTION <i>(If applicable)</i> <b>N/A</b>

MI sampling of an adjacent concrete building foundation was also completed for PCBs.

E2 conducted a Removal Action (RA) to remove PCB, lead, and arsenic-contaminated soil and concrete in order to prevent exposure to an unacceptable human health risk of current surrounding residents and future potential users of the property. Excavated and removed soil and concrete containing contaminants greater than current HDOH EALs (1.2 mg/kg PCBs, 200 mg/kg lead and 24 mg/kg arsenic) from the approximate five-acre former VOA transmitter building area and transported the soil and concrete to the appropriate disposal facilities on and off-island.

19 TITLE AND LOCATION <i>(City and State)</i> <b>Asbestos Survey, Naval Base Guam, Guam</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2020</b>	CONSTRUCTION <i>(If applicable)</i>

**21. PROJECT OWNER'S INFORMATION**

a. PROJECT OWNER <b>NAVFAC Pacific</b>	b. POINT OF CONTACT NAME <b>Mr. Lance Zhai, P.E.</b>	c. POINT OF CONTACT TELEPHONE NUMBER <b>(808) 835-4039</b>
---	---	---

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)***

**Project Scope:** E2 completed an asbestos survey of 109 buildings with a total floor area of 987,057 square feet at Naval Base Guam (NBG). The work was completed in accordance with applicable Federal, Guam, and Navy laws, rules, regulations, orders, instructions, and industry standard practices.

E2 prepared a Work Plan and Health and Safety Plan prior to conducting the fieldwork. Four one-month field mobilizations were completed. The primary tasks completed during the field work included verifying and update building floor plans, identify accessible Homogeneous Areas (HAs) of suspect asbestos-containing materials (ACM), with the exception of roofing materials, record survey information onto data sheets and building floor plans, collected representative building material samples for each accessible HA identified that could be sampled, photographed sample locations and assumed ACM, where permitted; and repaired sample locations.

A total of 7,134 bulk samples were collected for laboratory analysis. Data was managed, tracked, and checked, as follows. All field and laboratory data was inputted into a master spreadsheet for each building, most HAs and all sample locations were identified on floor plans prepared using AutoCAD for each building, and a three-level Quality Assurance/Quality Control review was completed on the data and figures. Field team members first reviewed the electronic data entered for accuracy and completeness and checked the figures to ensure HAs and sample locations were properly drawn. The second review was completed by a Senior Engineer who reviewed the data, figures, and laboratory results. A final review was completed by the Project Manager for completeness.

For each building surveyed, E2 prepared an individual Draft and Final Survey Report. Each report included a summary of previous survey reports where available, summary data table, floor plans with approximate locations of each sample taken and the approximate extent of identified HAs, a close-up and panoramic photograph log of the samples taken, and the laboratory reports with chain-of-custody forms. Navy comments received on the Draft Survey Reports were incorporated into the Final versions.

**Project Highlights:**  
 E2 successfully coordinated and completed asbestos surveys, including sample collection, laboratory analysis, and reporting of over 7,100 bulk samples, in over 100 buildings.

E2 successfully coordinated the field sampling with the Contracting Officer's Representative and the NBG Asbestos Program Manager with minimal interruption to facility operations. E2 was able to accommodate critical facility operations at certain buildings by sampling at night, on the weekends, or within limited time windows.

E2 created hatch patterns to display the extents of the HAs on the floor plans, which will allow building managers to easily see the extents of the HAs and the positive asbestos results.

E2 provided preliminary results and reports for buildings that were scheduled for renovation or demolition prior to project completion.

**Cost:** \$1,065,234.

**21. PROJECT OWNER'S INFORMATION**

22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)*

**Project Scope:** Element Environmental, LLC (E2) prepared an Engineering Evaluation/Cost Analysis (EE/CA) that evaluated treatment and disposal alternatives to address the approximately 400 cubic yards of sand in the former Scrap Metal Dump (SMD) on Kure Atoll that contains PCB contamination. The purpose of the EE/CA was to recommend a site-specific non-time-critical removal action for the SMD. The primary objective of the removal actions evaluated in the EE/CA was to reduce and/or eliminate potential exposure to PCB contaminant levels identified as posing an unacceptable risk to ecological receptors. The selected removal action was designed to lower the PCB concentrations at the site to levels that are below State of Hawaii Department of Health (HDOH) Environmental Action Levels (EALs), which are protective of the biota (including threatened and endangered species) that nest, breed and reside on Kure Atoll. The following seven removal action alternatives were screened as potential approaches to remediating the PCB-contaminated soil at the former dump area on Kure: 1) No Action; 2) Natural Attenuation; 3) Surface Capping (Encapsulation); 4) Excavation and Off-site Disposal of Soil at a CERCLA-approved Facility; 5) Ex-Situ Treatment of Excavated Soil: Mycoremediation; 6) Ex-Situ Treatment of Excavated Soil: Thermal Desorption; and 7) Ex-Situ Treatment of Excavated Soil: Soil Washing. These potential remedial alternatives were evaluated using the nine criteria of short- and long-term effectiveness, implementability, and cost as specified in CERCLA (40 Code of Federal Regulations [CFR] §300.430) and the National Oil and Hazardous Substances Pollution Contingency Plan.

Based on the EE/CA and consultation with HDOH, an ex-situ treatment and encapsulation removal action was selected. E2, in conjunction with the University of Maryland, first completed a treatability study to identify a bio-amendment that enhances the in-situ degradation of PCBs. E2 then successfully excavated over 400 cubic yards of PCB-contaminated soil from the SMD and relocated it at a new landfill that was constructed in the middle of the island. PCB-contaminated soil was treated with the bio-amendment and encapsulated in activated carbon-containing geosynthetic material prior to being capped with clean fill.

E2 collected confirmation soil samples from the SMD and analyzed them in the field lab using immunoassay field test kits to ensure all of the PCB contaminated soil was removed. Six piezometers were installed around the perimeter of the new landfill and groundwater samples were collected to determine if PCBs were leaching into the groundwater. Sediment and biota samples were also collected near the SMD to establish baseline of PCB concentrations in the sediment and fish.

**Project Highlights:**

E2 led numerous stakeholder meetings in determining the appropriate remedy for the site, subsequently leading to agreement between the U.S. Coast Guard, HDOH, and U.S. Army Corps of Engineers on the chosen alternative.

E2 coordinated the field effort with Federal and State resource agencies to ensure that the sensitive habitats were not impacted.

E2 was able to successfully mobilize heavy equipment and supplies to the remote atoll.

**Cost:** \$1,498,580.

22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)*

**Project Scope:** Element Environmental, LLC (E2) has provided hazardous materials survey services to Kamehameha Schools since 2015. The following is a list of recent project experience:

- In 2017, E2 conducted demolition-level hazardous materials surveys for seven 1 or 2-story commercial buildings on five properties in Honolulu. Suspect asbestos, lead paint, and arsenic-containing canec panels were sampled from interiors, exteriors, and safely accessible roofs, and the samples were submitted for analysis. The work also included visual inventories of fluorescent light fixtures and suspect polychlorinated biphenyl (PCB)-containing ballasts. E2 prepared a survey report for each of the seven buildings.
- For the Konia Renovation Project on the Kapalama Campus in 2016, E2 conducted a hazardous materials survey of the interior of all classrooms and offices on both floors, with the exception of Room 106, restrooms, and above drop ceilings. E2 prepared a survey report and specifications for the bid package and provided subcontracted monitoring services during abatement.
- For the Hale Koa Renovation Project on the Kapalama Campus in 2016, E2 conducted hazardous materials survey of the interior of the 1-story building. E2 prepared a survey report and specifications for the bid package and provided subcontracted monitoring services during abatement.
- For the Ceiling Fans Installation Project at Kekuhaupio Gym on the Kapalama Campus, E2 conducted lead paint sampling and submitted the samples for analysis in 2015. E2 assisted with the preparation of a lead paint control measures specification for the required work
- For the Smoke Vents Replacement Project at the Princess Ke'elikolani Performing Arts Complex on the Kapalama Campus, E2 conducted asbestos sampling and submitted the samples for analysis in 2015.

**Cost:** \$99,900.00 (Five properties at 650, 710, and 740 Kohou Street; 1101 North King Street; and 1222 Kaumualii Street); \$34,169.74 (Konia); \$21,236.70 (Hale Koa); \$2,220.88 (Kekuhaupio Gym); and \$1,658.85 (Princess Ke'elikolani Performing Arts Complex).

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)***

Project Scope: Element Environmental, LLC (E2) conducted a limited hazardous materials survey of a two-story building (total area of 8,200 square feet) in Kalaeloa, Oahu, Hawaii. The DHHL is proposing to rehabilitate the former military personnel quarters for use as temporary transitional housing for homeless native Hawaiian beneficiaries who are on the DHHL's applicant wait lists. The building is constructed with concrete floors, concrete masonry unit (CMU) walls, concrete ceilings, and gypsum wallboard systems, and ceramic wall and floor tiles in the bathrooms.

E2 reviewed pertinent documents and available previous survey reports provided by the DHHL and provided a summary of pertinent findings in the report. The limited hazardous materials survey included: 1) sampling and testing of suspect asbestos-containing materials (ACM), arsenic in suspect canec panels, and lead in the paint not already sampled in previous surveys; and 2) a visual inventory for polychlorinated biphenyls (PCBs) and mercury in fluorescent light fixtures. The Limited Hazardous Material Survey fieldwork was completed in April and July 2023 and the report was completed in September 2023. The report included a summary of findings, data tables of sample results, AutoCAD figures showing approximate sample locations and hatched positive asbestos Homogeneous Area results, sample photographs, laboratory reports and chain-of-custody records.

E2 1) prepared bid documents for debris removal and hazardous materials abatement of the building; 2) conducted a pre-bid site visit for contractors; 3) evaluated bids and selected the abatement contractor; 4) held a pre-construction meeting; 5) reviewed contractor submittals; 6) obtained a subconsultant to provide project monitoring services during the abatement and disposal of asbestos-containing materials, moldy gypsum walls and ceilings, and loose and flaky lead paint, and the removal and disposal of assumed PCB ballasts and mercury tubes/bulbs; and 7) conducted random site visits to monitor abatement progress. The work also included the removal and disposal of a propane gas aboveground storage tank and underground piping extending to the building.

21. TITLE AND LOCATION <i>(City and State)</i> <b>PFAS Wastewater, Biosolids, and Compost Sampling and Testing at NAVFAC Hawaii Wastewater Treatment Plant and Navy Biosolids Treatment Facility</b>	22. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2024</b>	CONSTRUCTION <i>(If applicable)</i> <b>N/A</b>

**23. PROJECT OWNER'S INFORMATION**

a. PROJECT OWNER <b>NAVFAC Hawaii</b>	b. POINT OF CONTACT NAME <b>Mr. Laine Okimoto</b>	c. POINT OF CONTACT TELEPHONE NUMBER <b>(808) 471-4898</b>
--	--	---

24. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)*

**Project Scope:** Element Environmental, LLC (E2) conducted an environmental investigation for PFAS in NAVFAC Hawaii's WWTP wastewater, biosolids, and land where treated biosolids have been applied as areas to be studied. Three monitoring sites included 1.) The NAVFAC Hawaii Wastewater Treatment Plant (WWTP) at Joint Base Pearl Harbor Hickam (JBPHH), Oahu, Hawaii; 2.) Navy Biosolids Treatment Facility (BTF) at former Naval Air Station, Barbers Point (Kalaeloa) in West Oahu; and 3.) Golf Courses/other Navy property where Navy biosolids have been applied as a soil amendment.

The overall goal of this project was to provide a one-time snapshot of the PFAS burden in these media as an initial step for assessment of the potential exposure risks to humans and aquatic receptors. Although not sufficient to quantify long-term loads and risks to the environment, data generated from the study will be useful to assess potential risks and the need for follow-up studies.

As part of this goal, sample data will be collected in a manner that allows for the estimation of the dissolved-phase and total PFASs load in wastewater influent and effluent for the targeted day of sample collection. This information can be used with future, additional data to evaluate long term PFAS load to aquatic habitats, irrigated land and land where wastewater biosolids are used as a soil or compost amendment. The data will also provide insight on the fate and transport of PFAS compounds as they pass through a wastewater treatment system, including accumulation in biosolids.

E2 prepared a Work Plan which included Safety and Health, the sampling methodology, and specifics of sampling. E2 worked in conjunction with the State of Hawaii, Department of Health (HDOH) on the sampling efforts for split sampling.

Sampling efforts have been completed. The types of samples collected from monitoring sites included **wastewater samples:** 24-hour composite samples were collected from one influent and one effluent location. The primary influent sampling location was at the influent headworks located at the WWTP. The effluent sampling location was at Building 1357 within the WWTP. Two sets of samples were collected at each location and analyzed as a total and dissolved fraction. **Biosolids Samples;** biosolids samples were collected from Navy Biosolids Treatment Facility (BTF) at former Naval Air Station, Barbers Point (Kalaeloa). Biosolids was collected in triplicate using a Multi Incremental Sampling (MIS) Approach. **Soil Samples:** soil samples were be collected from a location where biosolids were applied at the Navy golf course. The sample was collected in triplicate using a MIS approach.

E2 worked with HDOH to analyze the data, and prepared a summary report of the split sampling. The report included sampling protocol and sample results, a tabulation comparing the Navy's results, HDOH's results, and HDOH's Environmental Action Levels, an analysis of data variability, level of confidence in the consistency of results, risk to the environment, and recommendations for future testing or actions.

**Project Highlights:**

E2 coordinated sampling schedules with appropriate Navy POCs, HDOH, laboratories, and courier services accounting for shipment schedules, laboratory turnaround time, and sample hold time.

E2 ensured technical accuracy. All completed work complied with federal, state, and local regulatory requirements.

E2 worked with HDOH for split sampling requirements.

**Aqueous Sampling:** E2 collected the aqueous samples for the Navy and the HDOH and delivered them to the HDOH.

**Biosolids Sampling:** The Navy hauled and spread the biosolids at the BTF for sampling.

Special consideration is taken prior to and during field activities to avoid PFAS cross-contamination.

**Cost:** \$144,567.

**25. FIRMS INVOLVED WITH THIS PROJECT**

**F. EXAMPLE PROJECTS THAT BEST ILLUSTRATE E2'S QUALIFICATIONS FOR THIS PROJECT CATEGORY (7)**

19. TITLE AND LOCATION <i>(City and State)</i> <b>Environmental Services for Kekaha Residential Lots, Unit 4 Subdivision</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2019</b>	CONSTRUCTION <i>(If applicable)</i> <b>N/A</b>

**21. PROJECT OWNER'S INFORMATION**

b. PROJECT OWNER <b>State of Hawaii, Department of Hawaiian Home Lands</b>	b. POINT OF CONTACT NAME <b>Mr. Stewart Matsunagta</b>	c. POINT OF CONTACT TELEPHONE NUMBER <b>(808) 620-9283</b>
---	---	---

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)***

**Project Scope:** In 2019, Prime Contractor E2 completed site characterization activities at the Kekaha Residential Lots (KRL) site to further evaluate the environmental condition of surface and subsurface soil and fruit, vegetables, and herbs at the Kekaha Residential Lots, Unit 4 Subdivision site located in Kekaha, Kauai, Hawaii. The site investigation scope of work was based on information provided by the Department of Hawaiian Home Lands (DHHL), interviews with the KRL residents, and the findings of the previous environmental work completed at the property.

Site characterization activities included public meetings and interviews with affected residents, site visits, *MULTI INCREMENT® (MI)* surface soil screening/sampling for all 50 lots for metals, subsurface soil screening/sampling for Lots 3 and 39 for metals and petroleum-related contamination, evaluation of heavy metals in vegetables grown onsite, and interfacing with community and regulatory agencies and residents. The environmental work was conducted in general accordance with guidance provided in the State of Hawaii Department of Health (HDOH) Hazard Evaluation and Emergency Response (HEER) Office Technical Guidance Manual (TGM). DHHL and E2 worked with the HDOH HEER Office to design and implement a community outreach and site investigation process to further evaluate the presence/absence and magnitude of heavy metals and debris contamination at the site in a transparent, informational manner so that residents would understand and trust the process and results. Soil sampling was conducted using *MI* sampling methodology. Each sample was thoroughly mixed in a resealable bag and screened on location for heavy metals (arsenic, cadmium, chromium, lead, selenium, and silver) using an X-ray Fluorescent (XRF) detector. The XRF screening process was demonstrated, and findings were discussed with available residents at the time each lot was sampled. Based on observations made in the field during the investigation and the soil sample results, the following findings were determined.

**Project Highlights:**  
 E2 worked closely with DHHL and HDOH to develop the sampling methodology, and present the results, findings, and the way forward in a way that the residents could easily understand.  
  
 E2 participated in public meetings and met with and interviewed the residents, discussed proposed project activities and findings, and addressed questions and concerns.

- Heavy metals were not detected in the surface soil in any of the lots (except for Lot 3) at concentrations that exceed HDOH Tier 1 EALs.
- Heavy metals were not detected in Lot 3 subsurface soils at concentrations that exceed HDOH Tier 1 EALs with the exception of arsenic. The Lot 3 sample was additionally analyzed for bioaccessible arsenic. Arsenic and bioaccessible arsenic concentrations indicate that the soil is a Category B Soil, which is minimally impacted.
- Surface and subsurface soil within the boat maintenance area of Lot 39 have been negatively impacted by engine maintenance activities. Concentrations of diesel-related hydrocarbons are present at concentrations that exceed maximum allowable levels for residential and commercial/industrial use areas.
- Metals were not present in produce grown in residents' yards at levels of concern.
- Debris, including glass, metal, coal-like material, char, fabric, and ceramic, is present in surface and subsurface soil throughout the subject property and poses a physical hazard to the residents.

E2 prepared Fact Sheets for each individual lot owner to provide a summary of the sample results, a summary report, and a soil management plan to provide long-term management guidance for debris and tar remaining in surface and subsurface soil.

**23. FIRMS INVOLVED WITH THIS PROJECT**

19. TITLE AND LOCATION <i>(City and State)</i> <b>Asbestos Survey, Commander Fleet Activities Yokosuka, Japan, Yokosuka, Japan</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>Ongoing</b>	CONSTRUCTION <i>(If applicable)</i> <b>N/A</b>

**21. PROJECT OWNER'S INFORMATION**

a. PROJECT OWNER <b>NAVFAC Pacific</b>	b. POINT OF CONTACT NAME <b>Mr. Lance Zhai, P.E.</b>	c. POINT OF CONTACT TELEPHONE NUMBER <b>(808) 587-0230</b>
---	---	---

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)***

**Project Scope:** E2 is conducting an asbestos survey of 100 buildings with a total area of 2,139,464 sf at Commander Fleet Activities Yokosuka (CFAY). The work is being completed in general accordance with applicable federal, Japan, and Navy laws, rules, regulations, orders, instructions, and industry standard practices. E2 prepared a Work Plan and Health and Safety Plan prior to conducting any field work. The field survey includes the following primary components:

- Identification of Homogenous Areas (HAs);
- Collection of survey information onto data sheets and building floor plans;
- Collection of representative building material samples for each HA identified;
- Collection of closeup and panoramic photographs of sample locations and assumed asbestos containing material (ACM);
- Recording all data collected; and
- Repair of sample locations.

A total of 6,645 bulk samples were collected to date for laboratory analysis. Upon completion of the survey, E2 did a survey of the data which included the following;

- All data collected inputted into a spreadsheet for each location;
- All floor plans of sample locations identified on AutoCAD files; and
- Conducted Quality Assurance/Quality Control of survey results.

For each building surveyed, E2 will prepare a Draft and Final Survey Report, which will include a summary tables of findings, floor plans with approximate locations of samples taken, extent of most HAs, a closeup and panoramic photo log of samples, chain of custody forms and laboratory reports.

**Project Highlights:**

E2 field crew successfully coordinated with NAVFAC Pacific personnel prior to the field work at CFAY to identify roles and responsibilities, develop the sample data collection protocols including sample identification, labeling, and handling, and develop sample documentation protocols including field notes, photographs, and database entry.

E2 was able to successfully coordinate the CFAY asbestos field survey with the many building occupants allowing them to continue to operate normally.

**Cost: \$999,976.**

19 TITLE AND LOCATION <i>(City and State)</i> <b>Preliminary Environmental Assessment and Site Inspection, USCG Air Station Barbers Point, Kapolei, Oahu, Hawaii</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2022-Ongoing</b>	CONSTRUCTION <i>(If applicable)</i> -

**21. PROJECT OWNER'S INFORMATION**

a. PROJECT OWNER <b>United States Coast Guard</b>	b. POINT OF CONTACT NAME <b>Mr. Mark Marini</b>	c. POINT OF CONTACT TELEPHONE NUMBER <b>(843) 819-1964</b>
--	--	---

22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)*

**Project Scope:** Element Environmental (E2) conducted an Environmental Assessment of the Air Station Barbers Point (ASBP) located in Kapolei, Hawaii.

E2 conducted a Preliminary Assessment (PA) and a Site Investigation (SI) across the entire United States Coast Guard (USCG) Air Station Barbers Point (ASBP) Installation. The primary purpose of this project was to gather data for environmental media (soil and groundwater) to determine residual environmental impact of current and former activities at the installation.

E2 conducted a preliminary assessment/records search of the site, including meeting with the on-site contacts, and review of previous environmental investigations, to determine the potential areas of contamination at the site based on historical and current site use to determine if there is a remaining source of PCBs and/or pesticides and other contaminants including those listed below, at the site through investigation (soil and groundwater sample analysis). RCRA 8 metals and Copper by EPA Method 6010B & 7470A, PAHs by 8270C SIM, DDT and other legacy chlorinated pesticides by 8081, PCB by 8082, PFAS by 1631, Dioxins by 8290, and Hexavalent Chromium.

The PA identified several concerns from former and ongoing site use. ASBP is a USCG air station that is located on the site of a former US Navy Base. The US Navy had multiple sites that may have left legacy contamination issues for the base. There is a Base Realignment and Closure (BRAC) closure report on environmental liabilities associated with former Navy activities and a recent preconstruction environmental survey that discovered low levels of PCBs near the site for construction. A significant concern from the BRAC report is the existence of a former airfield Firefighting Training Pit (FFTP) located on the current base.

Aqueous Film Forming Foam (AFFF) containing Poly- and Per- Fluoroalkyl Substances (PFAS) was used in firefighting training exercises at the pit. PFAS are very stable emerging contaminants with conservative United States Environmental Protection Agency (USEPA) Health Advisory Levels (HALs) set in the part per trillion level. Knowledge and data continue to evolve our understanding of the environmental and health impacts associated with the release of PFAS. Certain PFAS, most notably some of the perfluoroalkyl acids (PFAAs), such as perfluorooctanoate (PFOA) and perfluorooctane sulfonate (PFOS), are mobile, persistent, and bioaccumulative, and are not known to degrade in the environment.

A drum storage area was located near the FFTP where waste oils were stored for use in igniting objects for firefighting training purposes. A sump was used to collect fluids that were drained from the FFTP. An injection well near the taxiway was impacted by a former fuel spill on the site. The Coast Guard HC-130 aircraft stationed at ASBP are coated with paint which contains cadmium and chromium. The installation includes a hangar where aircraft paint maintenance is performed.

Fieldwork was conducted in accordance with a work plan that was based on the findings from the PA. Surface soil samples were collected from sixteen Decision Units (DUs) representing the entire unpaved surface of the base. DUs were established based on past and present site use and related potential impacts. A building was erected over the area where a surface soil sample contained slightly elevated levels of PCBs in the 2012 phase II

**Project Highlights:**

E2 has expertise in performing a PFAS investigation at Air Station Barbers Point.

E2 has personnel with direct experience working with PFAS chemicals at Air Station Barbers Point in Hawaii.

**Cost:** \$194,057.

**F. EXAMPLE PROJECTS THAT BEST ILLUSTRATE E2'S QUALIFICATIONS FOR THIS PROJECT CATEGORY (9)**

19 TITLE AND LOCATION <i>(City and State)</i> <b>Preliminary Environmental Assessment and Site Inspection, USCG Air Station Barbers Point, Kapolei, Oahu, Hawaii</b>	20. YEAR COMPLETED	
	PROFESSIONAL SERVICES <b>2022-Ongoing</b>	CONSTRUCTION <i>(If applicable)</i> -

**21. PROJECT OWNER'S INFORMATION**

--	--	---

investigation. An adjacent DU was sampled in this investigation.

Groundwater monitoring wells were located down gradient from areas of concern that were identified during the PA. Opportunistic subsurface soil samples were collected from the borings used to install the groundwater monitoring wells. Existing site injection wells were also sampled for groundwater. Surface water was collected from a sump associated with the FFTP.

Sample results identified significant impacts from the FFTP. Results from several samples exceeded HALs and Hawaii Department of Health (HDOH) Environmental Action Levels (EALs) for PFAS. High levels of several PFAS compounds were identified in the sediments that remain within the FFTP, in the decision unit located around the FFTP, and from three decision units adjacent to the FFTP. Groundwater samples collected from a monitoring well located just down gradient from the FFTP contained significant levels of PFAS. The sump which received liquids that drained from the FFTP contained very high levels of PFAS as well. The large DUs located around DU-1, adjacent to the FFTP have significantly elevated levels of PFAS. It is likely that most of the contamination is associated with the area close to the FFTP and most of the area of the western side of the base have significantly lower levels than currently reported. Further delineation of this part of the base is warranted to resolve this. Low levels of PFAS which exceed the unrestricted EAL but were below the commercial/industrial limits were identified in all surface soil samples. No other COPCs were identified at concentrations of concern. All fieldwork was conducted with an approach to ensure the health and safety of the sampling team, base personnel, and the environment. Prior to the start of work, a comprehensive Health and Safety Plan was developed and followed throughout all work steps.

The thirteen PFAS compounds (PFOS, PFOA, 6:2 FTS, PFDA, PFDoA, PFHps, PFHpA, PFHxS, PFNA, PFOSA, PFPeA, PFTrDA, PFUnA) detected their respective maximum contamination level in surface soils collected in parcel A likely represent different legacy formulations of AFFF used over several decades.

a. PROJECT OWNER <b>City and County of Honolulu Department of Design and Construction</b>	b. POINT OF CONTACT NAME <b>Ms. Lisa Kimura, P.E.</b>	c. POINT OF CONTACT TELEPHONE NO. <b>(808) 768-3486</b>
--	--	--

**22. BRIEF DESCRIPTION OF PROJECT AND RELEVANCE TO THIS CONTRACT *(Include scope, size, and cost)***

**Project Scope:** Element Environmental, LLC (E2) was retained by R.M. Towill Corporation (RMTC) to conduct Phase I and II Environmental Site Assessments (ESAs) on one parcel of undeveloped land located at Fort Weaver Road and Geiger Road, Ewa Beach, Oahu, Hawaii. The City and County of Honolulu (CCH), owner and operator of the Honouliuli Wastewater Treatment Plant (WWTP), acquired the 48-acre parcel of land to expand their secondary treatment operations. In preparation for the proposed construction, E2 completed a Phase I ESA in 2016 to identify potential environmental issues which may impede construction activities on the newly acquired parcel.

The Phase II ESA scope of work was performed to evaluate the presence/absence and nature of contamination on the site based on relevant findings of the Phase I ESA. Phase II ESA activities were also conducted in the vicinity of an abandoned Navy fuel line located on the adjacent Honouliuli WWTP site, parallel to Geiger Road, where portions of the abandoned fuel line will be removed during the construction of a drainage basin. Phase II activities included surface and subsurface soil sampling and evaluation of stockpiled soil/debris and a historical landfilled area. The subject property was historically used for railroad, plantation, and military purposes. An abandoned Navy fuel pipeline is present on and/or adjacent to the southeast portion of the subject property. A second fuel line runs along the old railroad tracks, parallel to the north boundary of the subject property.

**Project Highlights:**

E2 utilized incremental sampling methodology to characterize surface soil at the site.

E2 evaluated the nature and extent of waste materials discovered in the shallow dump site using an excavator.

**Cost:** \$331,100.

Contaminants of potential concern were identified for the subject and adjacent WWTP property based on historical property use and included the following.

- Former sugar cane cultivation – organochlorine (OC) pesticides and arsenic.
- Former railroad and plantation employee housing, former military use, and other former and current structures – chlordane and lead.
- Petroleum pipelines on/adjacent to the site – petroleum-related constituents and metals.
- Landfilling and soil/debris stockpiles – volatile and semi-volatile constituents, pesticides, metals, polychlorinated biphenyls (PCBs), and asbestos.
- Miscellaneous industrial use – volatile and semi-volatile constituents, metals, and PCBs.

Soil sample results were compared to State of Hawaii Department of Health (HDOH) Tier 1 Residential and Commercial/Industrial environmental action levels (EALs). Based on the Phase II ESA sample results and observations made during the investigation, E2 concluded the following.

Subject Property:

Lead and arsenic were detected in the surface (lead) in the decision unit (DU-9) (dump site) and near-surface (arsenic) soils at boring B9 on the subject property at concentrations exceeding HDOH Tier 1 EALs. The dump site (DU-9) appears to occupy a large shallow sinkhole.

**F. EXAMPLE PROJECTS THAT BEST ILLUSTRATE E2'S QUALIFICATIONS FOR THIS PROJECT CATEGORY (10)**

19 TITLE AND LOCATION <i>(City and State)</i> <b>Phase I and II Environmental Site Assessments, Honouliuli Wastewater Treatment Plant, Ewa Beach, Oahu, Hawaii</b>	20. YEAR COMPLETED

--	--	--

- Debris was observed mixed with the soil, and included glass and porcelain shards, bottles, basalt rocks, pots and other household cooking implements, pieces of rusted metal, and wood.
- Petroleum-related analytes were not detected in subsurface soil samples collected from the capillary fringe in the soil borings located in the vicinity of the petroleum pipeline that runs adjacent to the north boundary of the subject property.
- None of the tested analytes were detected in soil samples collected from the three soil stockpiles located in the north-central area of the subject property. This soil can be reused on-site as "clean" fill material.

Adjacent Honouliuli WWTP Site:

- None of the tested analytes were detected in soil samples collected from the soil borings located in the vicinity of the abandoned Navy fuel pipeline that runs along the south side of the Honouliuli WWTP, parallel to Geiger Road.
- Petroleum-impacted material is not anticipated to be encountered within the excavation required for the proposed drainage basin construction.

## H. ADDITIONAL INFORMATION

28. PROVIDE ANY ADDITIONAL INFORMATION AT YOUR DISCRETION. ATTACH ADDITIONAL SHEETS AS NEEDED

Element Environmental, LLC (E2) Element Environmental, LLC (E2) has been in business since October 2005. E2 offers a wide range of environmental consulting, environmental engineering design, and water resource evaluation services.

E2 offers the personal attention and flexible decision-making capabilities of a small business while providing the breadth of expertise and experience of a large firm. E2 personnel work closely with a wide range of clients.

E2 provides innovative, cost-effective solutions using the latest technology to obtain client objectives while complying with pertinent environmental regulations. E2 completed projects throughout the State of Hawaii and the Pacific Rim for both the private sector and government clients.

### **ELEMENT ENVIRONMENTAL, LLC**

- Established in 2005
- Operating for 19 years
- Small Business

### **Education, Training & Qualifications of Key Personnel**

E2's personnel of thirty-nine (39) professionals have over 500 years of combined professional experience in environmental and engineering services with seven (7) licensed professional engineers and one (1) licensed geologist. They are either life-long residents of the State of Hawaii or have resided in the state for over 26 years. As a result, the staff is intimately familiar with the local environment, regulations, and community concerns. E2 personnel is comprised of engineers, hydrologists, geologists, environmental scientists, and chemists. Most all individuals are college graduates with 21% earning advanced degrees, five (5) master's degrees, and two (2) doctorate degrees received from prestigious universities including Berkeley, Columbia University, Jacksonville University, Massachusetts Institute of Technology, Michigan Technical University, Mount Royal University, Purdue University, The California Polytechnical University at San Luis Obispo, The University of Vermont, University of California at Los Angeles, UC Santa Cruz, University of Colorado at Boulder, University of Notre Dame, Vanderbilt University, Willamette University, and the University of Hawaii at Manoa.

E2 is registered with the State of Hawaii, Department of Health (DOH) as an Asbestos Entity (A-0120) pursuant to Hawaii Administrative Rules, Chapter 11-504, and is also a certified Lead-Based Paint Activities Firm (PBF-0032) pursuant to Hawaii Administrative Rules, Chapter 11-41. Attachment 3 provides E2's staff licenses and asbestos and lead certifications.

### **AT-A-GLANCE PERSONNEL**

- 7 Licensed P.E. (6 Hawaii-Civil)
- 1 Licensed Geologist
- 2 Ph.D.

### **BREAKDOWN (39 PERSONNEL)**

- 5 Civil Engineers
- 7 Environmental Engineers
- 3 Geologists
- 1 Hydrogeologist/Hydrologist
- 8 Environmental Scientists
- 1 Chemist
- 1 Chemical Engineer
- 9 Technicians
- 4 Administrative Staff

### **STATE OF HAWAII DOH CERTIFIED**

- 22 Asbestos Inspectors
- 1 Asbestos Project Designer
- 16 Lead Risk Assessors
- 5 Lead Inspectors
- 1 Lead Project Designer

E2 has an asbestos project designer and inspectors, as well as a lead project designer, risk assessors, and inspectors.

E2 has demonstrated its ability to manage and execute complex, multi-disciplinary, and concurrent task orders for various clients. E2's principals and Senior Project Managers each have over 26 years of experience in contracting, fee proposal preparation, project management, and subcontractor management. E2's key senior personnel assignments include Program Manager, Ryan Yamauchi, P.E., Technical Director/Quality Assurance Manager, Roger Aoki, P.E., Health and Safety Manager, Matthew Neal and Eric Lau, P.E., Technical Manager (GIS/CAD).

**PROGRAM MANAGER**

**Mr. Ryan Yamauchi, P.E.**

- Contractual Matters
- Negotiations
- Invoicing
- Ensure the project has adequate resources
- Project Manager

**Program Manager, Mr. Ryan Yamauchi, P.E.,** Principal-in-charge will be responsible for contractual matters, fee proposal preparation and negotiations for task orders, invoicing, and ensuring adequate resources are provided for each task order. Mr. Yamauchi will be the primary point of contact with the contracting officer.

**TECHNICAL DIRECTOR**

**Mr. Roger Aoki, P.E.**

- Assign Technical Staff
- Assure Project has Technical Resources
- Contract Compliance
- Quality Assurance
- Project Manager

**Technical Director/Quality Assurance Manager, Mr. Roger Aoki, P.E.,** will be responsible for assigning the project managers and technical resources for each task order and tracking and ensuring compliance with project schedules and the technical aspects of the contract. Mr. Yamauchi and Mr. Aoki will have the authority to assign additional resources, stop work, and institute changes to ensure projects are completed safely, on time, and in compliance with the contract requirements. Mr. Aoki will also oversee the Quality Assurance (QA) of data and technical review of project deliverables. He will oversee the project chemists assigned to each task order to ensure laboratory data quality objectives are met and laboratory data are properly validated.

**HEALTH & SAFETY MANAGER**

**Mr. Matthew Neal**

- Execute Safety for Staff and Subcontractors
- Health and Safety Plans
- Authority to Stop Work
- Project Manager

**Health and Safety Manager, Mr. Matthew Neal,** will manage and execute the Health and Safety Program for the contract. Mr. Neal will oversee site-specific Health and Safety Plan preparation, assign Site Health and Safety Officers for each task order, conduct health and safety audits, verify personnel has the appropriate health and safety training for the duties that they are assigned, and ensure subcontractor compliance with the contract's health and safety requirements and E2's Health and Safety Program. Mr. Neal will have the authority to immediately stop work for safety reasons and institute changes to the work procedures.

**PROJECT MANAGERS**

- Ms. Arlene Campbell, L.G.
- Mr. Eric Lau, P.E.
- Ms. Bernice Balete, P.E.
- Mr. Marvin Heskett, III
- Ms. Angela Peltier
- Ms. Lindsay Mason, P.E.

Depending on the nature of the task orders, Mr. Yamauchi, Mr. Aoki, and Mr. Neal may also serve as Project Managers on select task orders. Senior Project Managers, Ms. Arlene Campbell, L.G., Mr. Eric Lau, P.E., Mr. Marvin Heskett, Ms. Bernice Balete, P.E., and Ms. Angela

Peltier may also be responsible for managing the technical staff assigned to the task order, managing, and coordinating team subconsultants working on the task order, and coordination and execution of all project tasks.

**Please refer to the following for additional information.**

Attachment 1 – Organization Chart

Attachment 2 – Qualifications of Key Personnel - education, years of experience, certifications, and training

Attachment 3 – Professional Licenses and Certifications

Attachment 4 – State of Hawaii Procurement Office, Certificate of Vendor Compliance and Good Standing

Attachment 5 – Certificate of Liability Insurance

## **Professional Services**

E2 has a history of completing projects throughout the State of Hawaii and Pacific Rim for both private and government clients for a variety of environmental, engineering, and water resources services. Over the last eighteen years, E2 has provided services to government agencies and private clients including the State of Hawaii, County of Hawaii, County of Kauai, County of Maui, and the City and County of Honolulu, NAVFAC Pacific, the U.S. Army Corps of Engineers; the U.S. Army Garrison Hawaii; the U.S. Coast Guard, Kamehameha Schools Bishop Estate, the Shell Oil Company, Getty Oil, Ball Corporation, and the Samsung Corporation. The large majority of E2's ongoing projects have been awarded by repeat clients who were satisfied with E2's abilities to control costs, provide high-quality work, and maintain and meet schedules. The following is a list of the professional services that E2 provides.

### **Environmental Services**

- Environmental Compliance Audits and Pollution Prevention Planning
- Phase I, II, and III Environmental Site Assessments (ESAs)
- Environmental Site Investigations (SIs), Remedial Investigations (RIs), Remedial Designs (CERCLA and Resource Conservation Recovery Act [RCRA])
- Hazardous Materials Surveys including Asbestos and Lead-Based Paint (LBP)
- Hazardous Waste Management and Corrective Action Studies
- Soil and Groundwater Remediation
- Landfill/Solid Waste: Permitting; Gas and Groundwater Monitoring, Reporting, and SIs; Fire Management; and Global Positioning System (GPS) Services
- Integrated Solid Waste Management Planning
- Underground Storage Tank (UST) Closures and Remedial Investigations
- Dredged Material Testing and Evaluation
- Water Quality Studies (including National Pollutant Discharge Elimination System [NPDES] Permitting and Monitoring)
- Storm Water and Non-Point Source Pollutant Discharges
- Environmental Assessments (EAs) and Environmental Impact Statements (EISs)
- Environmental Permitting
- Environmental Baseline Surveys (EBSs)
- Risk Assessments
- Biosolids Treatment and Composting
- Phytoremediation and Mycoremediation
- Geographic Information System (GIS)-based Mapping and Databases for Environmental Data

### **Utilities Services**

- Design of Water Distribution, Transmission, and Treatment Systems
- Design of Wastewater Collection, Treatment, and Disposal Systems
- Design of Storm Drainage Collection and Disposal Systems

### **Water Resources Services**

- Water Resource Planning
- Well Site Selection
- Hydrologic and Hydrogeologic Studies
- Well Design and Permitting
- Well Installation, Cleaning, Testing, Inspection, and Closure
- Groundwater Monitoring
- Groundwater Modeling

COUNTY OF HAWAII - PROJECT EXAMPLES

Below is a summary table of professional services provided to the County of Hawaii.

Project	Year Completed	Contract Amount	Description
<b>County of Hawaii – Solid Waste Division</b>			
Solid Waste Operational Analysis Study of the County of Hawaii Department of Environmental Management, Solid Waste Division	Ongoing	\$499,782	<p>E2 is currently gathering data, conducting interviews, developing recommendations, collaborating with stakeholders, and preparing a Feasibility Study report for the County of Hawaii Solid Waste Division.</p> <p>Future options to be considered:</p> <ul style="list-style-type: none"> <li>• Curbside Recyclable Collection</li> <li>• Municipal Solid Waste (MSW) Landfill for west (beside expanding WHSL) and east sides</li> <li>• Construction and Demolition (C&amp;D) Landfill for Big Island</li> <li>• WTE, all forms and technologies</li> <li>• Barging MSW To H-POWER, or elsewhere. Residual ash back to Big Island if H-POWER</li> <li>• Materials Recovery Facility (MRF), both clean and dirty options</li> <li>• Expand WHSL</li> <li>• Separate Recycling Division to include Abandoned Vehicle</li> </ul>

Project	Year Completed	Contract Amount	Description
<b>County of Hawaii - Wastewater Treatment Plants</b>			
Kealakehe Wastewater Treatment Plant Feasibility Study, Kona	Ongoing	\$394,800	E2 is currently preparing a Feasibility Study for the Kealakehe Wastewater Treatment Plant to support the United States Bureau of Reclamation Title XVI Program funding.
Kealakehe Wastewater Treatment Plant Headworks Upgrade, Kona	2022	\$20,391	E2 collected 30 bulk samples for asbestos and 15 paint chip samples for lead, conducted a field investigation, and reviewed as-built plans and other available previous survey reports. Prepared report.
Pua Pump Station at Hilo Wastewater Treatment Plant Hazardous Materials	2022	\$19,420	E2 conducted historical research, reviewed records, and conducted a site inspection of the Kealakehe Wastewater Treatment Plan. E2 also prepared a Summary Letter and a Limited Asbestos and Lead Paint Survey Report summarizing field sampling. E2 will prepare construction plans, specifications, and construction cost estimates to address closure of the UST and existing fuel lines if needed.

Project	Year Completed	Contract Amount	Description
<b><i>County of Hawaii - Landfills</i></b>			
Closed Kona Landfill Fire Monitoring	2016	\$389,000	E2 provided various consulting services at two closed landfills, including performing a geophysical survey, infra-red photography, and mapping to determine landfill boundaries and fire characterization, and preparing a landfill fire management plan. Prepared a landfill alternatives plan to evaluate fire control/extinction, waste mining, and other alternatives. Assisted with an U.S. Environmental Protection Agency (EPA)-supported fire control pilot test to evaluate the efficacy of using waste excavation and the application of foam/water as a method to extinguish fire in landfill hot spots. Tasks included quarterly monitoring of landfill gas and subsurface fire conditions, preparation of quarterly and annual monitoring reports, and periodic fire management activities (e.g., carbon dioxide [CO2] injection, landfill cover maintenance, and landfill fire response, etc.).
Closed Waimea Landfill Fire Monitoring			
Closed Kona Landfill Subsurface Landfill Fire Monitoring and Maintenance	2015	\$260,000	E2 provided fire monitoring and control services for the closed Kona/Waimea/Waimea Landfills. The services included: landfill cover maintenance; bi-annual inspections/quarterly monitoring, which includes landfill gas sampling and reporting; semi-annual vegetation control; installation of new gas sampling probes; and fire control and response activities.
Closed Waimea Landfill Subsurface Landfill Fire Monitoring	2015	\$440,000	E2 conducted quarterly or semiannual monitoring of all functioning probes at the Waimea Landfill. Monitoring activities was conducted in general accordance with the Landfill Management Plan and at the interval specified in the previous monitoring report. Monitoring included collecting temperature and gas-composition data from the gas probes, sinkholes, cracks, and other designated areas at the landfill, evaluation of the landfill surface and soil cover maintenance, and evaluation of storm water runoff. Conducted an Infrared Survey and the results of the survey were included in the monitoring report. E2 will prepare monitoring reports with an annual summary included in the fourth quarter report. Summarized all monitoring activities at the site.
Closed Waimea and Closed Kailua-Kona Landfills Fire Management	2015	\$300,000	E2 reviewed historical documents and project files for the Kona Landfill available from the County of Hawaii and the State regulatory agencies to help identify potential measures that could be taken to control and minimize burning/smoldering areas at the landfill. E2 prepared a written summary of historical and environmental activities and provided a basis for recommendations for fire management options. E2 conducted an annual Infrared Survey to compare with landfill gas monitoring data to evaluate the subsurface

			<p>condition at the landfills. E2 conducted bi-monthly site visits to inspect the Kona landfill surface for new depressions, fissures, sinkholes, odor, smoke, and dead vegetation; and to document the overall conditions at the landfill. E2 conducted quarterly landfill cover maintenance at the landfills, which includes providing suitable cover material and backfilling sinkholes and/or cracks observed in the landfill. E2 conducted quarterly monitoring at the landfills, which includes collecting temperature and gas-composition data from the gas probes, sinkholes, cracks, and other designated areas at the landfill; evaluation of the landfill surface and soil cover maintenance; and evaluation of storm water runoff. Gas data and probe locations are entered into the Surfer® contouring and 3D surface mapping program to illustrate gas concentrations. Problematic areas are delineated based on the resultant gas contours and carbon dioxide is injected into the probes in and around those areas in order to suffocate the fire. E2 prepared quarterly monitoring reports to submit to the County summarizing landfill maintenance and monitoring activities. E2 facilitated the closure of portions of the landfill's dilapidated landfill gas extraction system in 2014 in hopes of reducing the amount of oxygen available to smoldering areas in the landfill.</p>
--	--	--	--

E2 staff can provide the County of Hawaii with the knowledge and technical expertise related to engineering as below.

**Sewage/Wastewater and Industrial Waste Collection Treatment, and Disposal Systems Investigations and Assessments**

- **Slug Prevention Plan for Commander Fleet Activities Sasebo, Japan.** E2 evaluated facilities and activities with the potential to discharge or spill pollutants that could cause a slug load, which would impact the operation, maintenance, or management of domestic wastewater treatment systems.
- **Non-Domestic Wastewater Management Plan for NAVFAC Hawaii, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 initially screened over 8,000 facilities to determine if the facility discharges or could potentially discharge non-domestic wastewater to the collection system. After the initial screening, E2 inspected approximately 800 facilities to determine if non-domestic discharges were occurring and whether proper pretreatment is being completed. Site inspections and interviews with facility managers were completed for those facilities that were confirmed to have non-domestic discharges. The management plan included a list of the inspection findings along with design recommendations to eliminate, divert, and/or pretreat the discharges. Cost estimates to implement the recommendations were provided.

E2 determined the maximum allowable headworks loading (MAHL) for the NAVFAC Hawaii Wastewater Treatment Plant (WWTP). E2 performed an assessment of the impacts of the non-domestic discharges on the NAVFAC Hawaii WWTP, the fate of non-domestic waste streams, sludge impacts (including disposal and potential reuse considerations), whole effluent toxicity impacts and WWTP removal efficiencies. Considering these assessments as well as outfall dilution, water quality standards in the Hawaii Water Quality Standards, and pertinent regulations specified in the National Pollutant Discharge Elimination System (NPDES) Permit, E2 will develop the MAHLs for chemical and biological pollutants of concern and provide recommended revisions to indirect discharge limitations.

- **Waimanalo Wastewater Treatment Plant R-1 Reuse Feasibility Study, Waimanalo, Oahu, Hawaii.** A Feasibility Study (FS) was completed for the United States of America Army Corps of Engineers and City and County of Honolulu to assess the technical, environmental, and economic feasibility of producing R-1 water at the Waimanalo Wastewater Treatment Plant for reuse in the Waimanalo community. The first component of the FS was a market survey that was completed to identify potential users in the community. The survey identified available potable and irrigation water sources; gauged interest from the potential users; gathered user concerns with R-1 water use; and identified potential R-1 water demands. The results of the market survey indicated strong interest in R-1 water reuse from the Olomana Golf Links, Waimanalo District Park, Waimanalo Beach Park, Honolulu Polo Club, and Waimanalo Wastewater Treatment Plant (WWTP). A conceptual design for the first phase of improvements was completed and identified the WWTP improvements, the distribution system improvements, and the end user improvements.
- **Large Capacity Cesspool Closure, Hickam Field, Oahu, Hawaii.** E2 completed the closure design for five Large Capacity Cesspools (LCCs) located within the former Hickam AFB portion of JBPHH. These active LCCs are located at Buildings 2115, 3510, 3220, 3004, and 3435. The design services included determining the closure requirements for the LCC, determining the alternative disposal method (i.e., replacement with septic tank/leach field, or connection to existing wastewater collection system, development of construction drawings, specifications, and detailed cost estimates for the closure of the LCCs as well as completion of draft LCC closure applications for the State of Hawaii Department of Health. The project included historical document review, topographic surveys, geotechnical investigations, and engineering services.

E2 interviewed building tenants regarding their operations to determine the average and peak design flows for the new wastewater facilities. Percolation tests were completed at the three LCC sites that were

determined to require leach fields. One of the challenges for the project is the shallow groundwater table that is present at several of the sites located near the shoreline. The shallow groundwater requires the use of packaged pump stations to pump effluent from the septic tank to an elevated leach field. The relatively low flows (about 15 gallons per minute [gpm]) also required the design of packaged low flow progressive cavity pump stations. Waianae Agricultural Park Drainage Improvements. E2 completed the design of miscellaneous improvements to the drainage system at the Waianae Agricultural Park. The improvements included slope stabilization of drainage ways, diversion of runoff into an infiltration basin, design of overflow protection drainage intakes for the infiltration basin, and repairs to existing concrete drainage swales. During large rain events, debris being carried by stormwater has caused the primary drainageway intake to clog and flows to overtop the drainage system causing washout of the access road and drainageway slopes. To mitigate the blockage of the drainage intake, E2 designed diversion structures that will route stormwater into an infiltration basin. The diversion structures will allow for stormwater to enter the infiltration basin even with heavy debris build-up. An elevated backup drainage intake was also designed in the infiltration basin that will collect stormwater overflow and prevent overtopping of the drainageway. Other improvements included riprap stabilization of drainageway slopes.

- **Pier 21 WWPS, Honolulu Harbor, Oahu, Hawaii.** E2 prepared construction documents for the replacement of the existing packaged pump system at the Pier 21 WWPS with a new aboveground pumping system. The Pier 21 WWPS provides wastewater service to industrial facilities located along Pier 21 in Honolulu Harbor. The design included installation of new pumps and related appurtenances while allowing continued use of the existing influent wet well manhole present at the site. The design also included the replacement of the existing force main from the WWPS to the wye connection, which connects the force main to another existing force main. The total length of the designed replacement was approximately 500 feet.
- **Kalewa Street WWPS, Oahu, Hawaii.** E2 designed a new packaged WWPS and new dual relief force main for the Kalewa Street WWPS. E2 was responsible for evaluating present and future wastewater flows from the tributary, sizing and selecting the new packaged pump station, and completing construction documents for the new packaged WWPS and new dual relief force main (1,300 feet). Integral to the design was planning the phasing of construction, which would allow continued and uninterrupted use of the airport facilities by the tenants while the new WWPS and new dual relief force main is constructed.
- **Lihue WWTP, Lihue, Maui, Hawaii.** E2 compiled and analyzed data to quantify the amount of Inflow and Infiltration that is associated with rainfall events at the site. Predictive equations based on rainfall and flow-monitoring data were developed using multiple linear regression methods. The analysis was used to evaluate whether the sewer system had the necessary capacity for potential future development. The objective of this project was to determine if reserve or additional capacity still exists within Lihue's Wastewater Collection System for future developments within the Hanamaulu Triangle development. SewerCAD was used to model the Lihue wastewater collection system.
- **Honouliuli WWTP Phase IC – R3 Water Reuse Pump Station Design, Ewa Beach, Oahu, Hawaii.** E2 evaluated the R3 water system demands provided by the client and select an appropriate pumping system to meet demands. The design will include the selection and sizing of pumps; section of process control equipment, and pump station configuration. E2 will provide design calculations and text for the Basis of Design. E2 will also assist with construction cost estimates for the pump station.
- **He'eia WWPS Improvements, Kaneohe, Oahu, Hawaii.** E2 assisted in providing edits to the section for "Closure of Underground Storage Tanks" for required demolition work. E2 also provided a rough abatement cost estimate. E2 be provided services during bidding and construction

## **Solid Waste Planning and Management**

- **Hazardous Waste Management Plan, Commander Fleet Activities Yokosuka, Japan.** E2 developed a Hazardous Waste Management Plan (HWMP) in accordance with all the applicable regulations and requirements and conducted a Closure Plan for the HWSA and PCB Storage area for Commander Fleet

Activities Yokosuka. Field work associated with a detailed review of existing Hazardous Waste Documents; (i.e., HWMP, Polychlorinated Biphenyl (PCB) Management Plan, Spill Prevention and Response Plan, and existing pertinent documentation, and any other Hazardous Waste plans/reports/assessments (i.e., Hazardous Waste profile sheets [HWPSs], Hazardous Waste shipment logs, Hazardous Waste Accumulation Points [HWAPs] summary sheets, etc.). Field work associated with a detailed survey of all Hazardous Waste generation points, HWAPs, and HWSAs; and field work associated with an on-site review of existing Hazardous Waste procedures for characterization and verification testing.

- **Hazardous Waste Management Plan, Marine Corps Base Camp Butler, Okinawa, Japan.** E2 prepared a Hazardous Waste Management Plan (HWMP), Waste Analysis Plan (WAP), and Hazardous Waste Storage Area Closure Plan. The HWMP and WAP provide guidance on implementing a comprehensive plan for managing hazardous waste generated at Marine Corps Base Camp (MCB) Butler for each of the camps, tenants, and contractors in the Camp Butler area of responsibility. The plan assigns responsibility and provides guidance on waste management procedures to ensure proper management of Hazardous Waste and conformance with applicable hazardous waste regulations. The HWMP also establishes hazardous waste management procedures applicable to all military, civilian, and contractor employees at MCB Camp Butler. E2 toured each major tenant command to evaluate hazardous waste generating activities and hazardous waste accumulation points to assess proper management and characterization of waste streams. The plan provides recommendations on pollution prevention and hazardous waste minimization as well as recommendations to improve the overall Hazardous Waste Management program.
- **Integrated Solid Waste Management Plan for U.S. Fleet Activities Sasebo, Japan.** E2 developed an Integrated Solid Waste Management Plan (ISWMP) for Commander Fleet Activities (CFA) Sasebo. The CFA Sasebo existing ISWMP was updated including solid waste management programs (including source reduction, recycling, and composting) by optimizing their design and operation through an integrated analysis of all comprehensive, cost-effective alternatives. The ISWMP will aid CFA Sasebo in maximizing its non-hazardous solid waste diversion. Documenting, quantifying, and providing options for diverting food waste (food service (galley), restaurants, food courts, and commissary), wood, organics, and other recyclable material and maximizing the amount for revenue generated from the installation of Qualified Recycling Program (QRP). The plan will include estimated costs and timeframes for the implementation of installation-approved recommendations. The plan also provided ship off-load guidance criteria to control waste offloaded from homeport and to also provide a feasibility study of the QRP recyclables. The plan incorporated current Final Governing Standards, local, Department of Defense, Navy, and Federal laws, regulations, instructions, orders, and directives as well as innovative information about recycling, waste diversion, waste reduction awareness, composting, and affirmative procurement.
- **Integrated Solid Waste Management Plan for Hawaii Army National Guard, Oahu, Molokai, Maui, Hawaii.** E2 updated the existing Integrated Solid Waste Management Plan (ISWMP) dated October 2012 for Hawaii Army National Guard (HIARNG). E2 completed the Work Plan and Health and Safety Plans before conducting site visits. E2 conducted site visits to HIARNG Sites on Oahu, Molokai, Hawaii, and Maui. E2 updated the ISWMP with a contemporary and systematic approach to solid waste management at all HIARNG sites. IWSMP identified how to reduce, reuse, recycle, and manage waste that is protective of human health and the environment in local conditions.
- **Integrated Solid Waste Management Plan Marine Corps Air Station Iwakuni, Japan.** E2 prepared an Integrated Solid Waste Management Plan (ISWMP) that defined and documented the installation's current ISWMP, established goals for improving solid waste management, identified specific actions required to achieve the plan goals, promoted compliance with applicable Federal, Department of Defense, Marine Corps, and local solid waste management regulations and policies, and evaluated alternative designs for future solid waste management. Conducted field work that included a waste stream assessment, data collection, and evaluation to prepare the final ISWMP.
- **Integrated Solid Waste Management Plan, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 prepared an Integrated Solid Waste Management Plan (ISWMP) to define and document the installation's current ISWMP, establish goals for improving solid waste management, identify specific actions required to achieve the plan goals, promote compliance with applicable Federal, Department of Defense, and local solid

waste management regulations and policies, and evaluate alternative designs for future solid waste management. The ISWMP will aid Joint Base Pearl Harbor-Hickam in maximizing its non-hazardous solid waste diversion. E2 prepared a Work Plan and a Health and Safety Plan prior to the field work. The field work included waste stream assessment, data collection, and evaluation used to prepare the final ISWMP.

### **Spill Prevention and Countermeasures Plans**

- **Spill Prevention, Control and Countermeasure Plan, Pier 2 Cruise Terminal, Honolulu, Oahu, Hawaii.** E2 completed a Spill Prevention, Control and Countermeasure Plan (SPCC) for Pier 2 Cruise Terminal for the State of Hawaii, Department of Transportation, Harbors Division. E2 conducted a site visit for the location, prepared a site plan figure, and prepared the SPCC plan update.
- **Spill Prevention and Response Plan for 12 Sites in Okinawa, Japan.** E2 completed a Spill Prevention and Response Plan for Marine Corps Base Camp Butler, Okinawa, Japan. E2 inspected 324 aboveground storage tanks (ASTs), 29 underground storage tanks, 23 Chemical Storage Tanks, and 681 Electrical Transformers at 12 sites in Okinawa. E2 is currently preparing the reports.
- **Annual Spill Prevention Control and Countermeasures Plan Inspections of NAVFAC Hawaii Aboveground Storage Tanks and Oil Drum Storage Areas, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii (2013, 2015-Ongoing).** E2 completed the inspection of 170 ASTs and oil drum facilities annually since 2015 and has prepared a report which included locations, conditions, and recommendations for each tank.
- **Spill Prevention, Control and Countermeasure Plans for three Honolulu Board of Water Supply Sites, Kalihi Corporation Yard, Halawa Shaft, and Kunia Wells 1, Oahu, Hawaii.** E2 conducted site visits and documented the capacity, type, contents, and condition of each ASTs/drums at three City and County of Honolulu Board of Water Supply sites; Kalihi Corporation Yard, Halawa Shaft, and Kunia Wells I. E2 prepared a separate SPCC plan for each of the three sites meeting the requirements of Federal Clean Water Act and Oil Pollution Act.
- **Spill Prevention, Control and Countermeasure Plan Update, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 completed a five-year update of the Navy SPCC plan for ASTs at all Navy facilities on Oahu, including Joint Base Pearl Harbor-Hickam (JBPHH)-Hickam Field and NAVFAC Hawaii facilities. A total of 456 ASTs were inspected and assessed by E2. An updated SPCC plan was developed for use by the Naval Supply Systems Command Fleet Logistics Center Pearl Harbor (NAVSUP FLCPH), NAVFAC Hawaii, JBPHH-Hickam Field, JBPHH-Naval Station, JBPHH-Wahiawa Annex, JBPHH-Lualualei Annex, Radio Transmitter Facility (RTF) Lualualei Annex, West Loch Annex, Beckoning Point, Kalaeloa, Pearl City Peninsula (PCP), and Manana Fire Station. E2 inspected and assessed 40 additional ASTs and integrated several more rounds of historical data into the SPCC Plan Update document that were not included in the Scope of Work, all at no additional cost to the Navy. E2 worked closely with NAVFAC Hawaii personnel to tailor the SPCC plan to specific Navy operations and to ensure the document could be easily used as a guide for Navy technical personnel and aid in spill prevention/response planning and management.

### **Hazardous Materials, Asbestos, Lead Paint Surveys**

- **Asbestos and Lead-Based Paint Survey, Singapore Area Coordinator, Sembawang, Singapore.** E2 is conducting Asbestos and Lead Based Paint Surveys of Family Housing (FH), Unaccompanied Housing (UH), and Navy Gateway Inns and Suites (NGIS). Lead dust wipe samples were collected from 80 NGIS units. Asbestos and lead paint sampling were conducted at 12 UH units. Asbestos and lead risk assessment/paint sampling or X-ray fluorescence (XRF) testing will be conducted for 188 wall panels in 61 FH units. Asbestos and lead risk assessment/paint sampling or XRF testing will be conducted at 113 FH units (76 buildings). Asbestos bulk and lead paint sampling or XRF testing, and a lead risk assessment will be conducted at 80 NGIS units. E2 prepared a Work Plan and Health and Safety Plan for the work, and has completed a portion of the field work. Detailed survey reports will be submitted upon completion of field work and laboratory analysis.

- **Asbestos Survey, Naval Base Guam, Guam.** E2 completed an asbestos survey of 109 buildings with a total area of 1,014,904 square feet at Naval Base Guam. The work was completed in general accordance with applicable federal, Guam, and Navy laws, rules, regulations, orders, instructions, and industry-standard practice. E2 prepared a Work Plan and Health and Safety Plan prior to conducting field work. The field survey included the identification of Homogeneous Area (HAs), collection of survey information onto data sheets and building floor plans, collection of representative building material samples for each HA identified; collection of closeup and panoramic photographs of sample locations and assumed asbestos-containing material; and repair of sample locations. A total of 7,134 bulk samples were collected for laboratory analysis. For each building surveyed, E2 prepared a Draft and Final Survey Report, which included the findings in a summary data table, floor plans with approximate locations of samples taken, the extent of most HAs, a closeup and panoramic photo log of samples, and laboratory reports.
- **Hazardous Materials Survey, Former Sears Store Unit, Windward Mall, Kaneohe, Oahu, Hawaii.** E2 conducted a comprehensive demolition-level hazardous materials survey for the former Sears store unit. Suspect asbestos-containing material, lead paint, and arsenic-containing canec panels were sampled and submitted for laboratory analysis. The survey also included visual inventories of fluorescent light fixtures for PCB-containing ballasts, mercury-containing lamps, thermostats, and light switches. E2 prepared a report, including a review of as-built drawings, summary data tables, sample location figures, and sample photographs.
- **Hazardous Materials Surveys, Honouliuli Wastewater Treatment Plant Secondary Treatment Project, Ewa, Oahu, Hawaii.** E2 completed a hazardous material survey of over 30 buildings/structures that will undergo whole or partial demolition or renovation. Suspect asbestos-containing material, lead paint, and arsenic-containing canec panels were sampled and submitted for laboratory analysis. The survey also included visual inventories of fluorescent light fixtures for PCB-containing ballasts and mercury-containing lamps. E2 prepared a survey report, including summary data tables, sample location figures, and sample photographs. E2 also prepared hazardous materials specifications and construction cost estimates for the bid package, responded to requests for information, and reviewed pertinent contractor submittals.

### **Hazardous Materials/Substances Site Investigations and Testing**

- **Phase I and II Environmental Site Assessments for Kaunakakai Harbor, Molokai, Hawaii.** E2 completed a Phase I Environmental Site Assessment (ESA) of the State of Hawaii, Department of Transportation, Harbors Division owned portion of Kaunakakai Harbor to identify Recognized Environmental Conditions (RECS) based on historic and current land uses. A Phase II ESA was also completed to investigate the RECs. The Phase II ESA consisted of the collection of surface and subsurface *MULTI INCREMENT*<sup>®</sup> soil samples from four decision units across the pier area, and installation of eight groundwater monitoring wells and the collection of groundwater samples. The soil and groundwater samples were analyzed for petroleum-related contaminants, heavy metals, polychlorinated biphenyls (PCBs), and pesticides. A Phase II ESA report was prepared to summarize the sampling results. Prepared an Environmental Hazard Evaluation and Environmental Hazardous Management Plan to manage potential risks posed by contaminated soil to human health and the environment.
- **Site Investigation at Former Molokai Electric Company and Galierher-Ono Parcels, Kaunakakai, Molokai, Hawaii.** E2 conducted a site investigation (SI) of the former Molokai Electric Company (MOECO) site in downtown Kaunakakai. The SI included a comprehensive study of residual near and subsurface contamination from previous MOECO activities, primarily from chemicals of concern polychlorinated biphenyls (PCBs), and petroleum and heavy metals. E2 collected over 700 discrete soil samples as well as 88 *MULTI INCREMENT*<sup>®</sup> soil samples, soil-gas, concrete, and groundwater samples. In addition, E2 conducted a synoptic water level study in order to help determine the potential migration of subsurface contaminants. Prior to the completion of the field portion of the project, E2 completed two Special Management Area permit applications for the County of Maui for the project. The results of the SI will be used to determine the most appropriate remedial action for the site.

- **Puna Agricultural Park Phase I Environmental Site Assessment, Puna, Island of Hawaii, Hawaii.** E2 completed a Phase I Environmental Site Assessment (ESA) for Puna Agriculture Park located in Puna, Hawaii Island, Hawaii for the DOA. The Phase I ESA was to identify environmental issues as part of a Puna Agricultural Park Feasibility Study of undeveloped land. E2 also drafted a Feasibility Study to determine the suitability of proposed parcels for agricultural use. E2 provided additional data collection from three parcels totaling 5,845 acres to support this Feasibility Study. E2 reviewed the existing conditions and conducted a market survey to determine public interest in developing the agricultural park.
- **Navy Environmental Hazard Evaluation/Environmental Hazard Management Plans for Ford Island Fuel Farm and UST NS-29, Oahu, Hawaii.** E2 completed an Environmental Hazard Evaluation (EHE)/Environmental Hazard Management Plan (EHMP) to identify and evaluate potential hazards to human health and sensitive ecological receptors posed by residual gasoline-impacted groundwater and/or soil identified at the Ford Island Fuel Farm and Underground Storage Tank (UST) NS-29 sites under current and potential future site conditions. The EHE/EHMPs were conducted in general accordance with the State of Hawaii Department of Health guidance and included a review of historic land use and environmental investigations conducted at the site, evaluation of the nature, magnitude, and extent of contaminants of potential concern, evaluation of potential negative impacts on human health and the environment posed by allowing contaminated media to remain in place, and a discussion of impacted media management and disposal of to prevent unmitigated exposure to human and ecological receptors. Based on the EHEs, a “No Further Action with Restrictions” status was recommended for both sites.

### **Hydrographic Surveys/Dredged Material Evaluations**

- **Hydrographic Survey and Dredged Material Evaluation for Maintenance Dredging at the Inner Apra Harbor Entrance Channel, Alpha-Bravo Turning Basin, Finger Piers, And Lima, Mike, and November Wharves, Apra Harbor, Guam.** E2 conducted a characterization of dredge-sediment at three Confined Disposal Facilities (CDFs); Orote Point, Field 5, and the Ship Repair Facility, to determine the suitability of the sediment for reuse/disposal. About 30 acres of vegetation were cleared or transects cut and surveyed. Over 30 *MULTI INCREMENT*<sup>®</sup> soil samples were collected from about 280,000 cubic yards of sediment material in the three CDF units. Unexploded ordinance clearance was required at each of the sites during all field operations. E2 managed multiple crews of both subcontractors and E2 personnel simultaneously. A Dredge Material Management Plan was completed detailing the results with possible reuse alternatives for the sediment.
- **Apra Harbor Sediment Sampling and Hydrographic Survey Naval Base Guam, Apra Harbor, Guam.** E2 completed a dredge material evaluation of the Northern Inner Apra Harbor area at Naval Base Guam. Four composite samples were collected from four project sub-areas; Alpha/Bravo Wharves, Entrance Channel, and Turning Basin area; Finger Piers; Lima/Mike Wharves; and November Wharf. A total of 20 locations were sampled to comprise the four composite samples. The composite samples were subjected to chemical and biological testing to determine if the sediment was suitable for ocean disposal at the designated Guam Deep Ocean Disposal site.

### **Environmental Permitting and Environmental Compliance**

- **National Pollutant Discharge Elimination System Stormwater Permitting and Compliance, Various Locations, Statewide, Hawaii.** E2 processed National Pollutant Discharge Elimination System (NPDES) permits for industrial facilities in Campbell Industrial Park, PVT Construction and Demolition Landfill on Oahu, and Princeville Landfill on Kauai. E2 has also processed NPDES permits for a private land owner in Kahala for the discharge of water and wastewater from decorative ponds and water features and for hydrotesting reservoir systems for the Honolulu Board of Water Supply. E2 also completed an industrial discharge connection permit to the City and County of Honolulu’s municipal separate storm sewer system (MS4) for an industrial complex in Kalihi.
- **401 and 404 Water Quality Certifications (WQCs) for improvements and embankment repairs to the Barbers Point Kalaeloa Harbor, Oahu, Hawaii.** State of Hawaii Department of Transportation Harbors

Division. E2 has experience with environmental permitting and certifications for compliance with Clean Water Act Sections 401 and 404. E2 has processed The 401 WQC was completed in coordination with the USACE Nationwide Permit 13 (NWP-13).

- **401 Water Quality Applicable Monitoring and Assessment Plan for Nuuanu Reservoir, Honolulu, Oahu, Hawaii.** The Honolulu Board of Water Supply repaired the Nuuanu Reservoir No. 4. The reservoir is in Nuuanu Valley adjacent to the Pali Highway, State Route 61, approximately 4 miles northeast of downtown Honolulu. The Nuuanu Reservoir repair project consisted of four primary tasks which required water quality monitoring, reservoir dredging, repairs to the intake tower and gangway, an outlet pipe extension, and roadway and embankment repairs. The Water Quality Applicable Monitoring and Assessment Plan (AMAP) was designed to address monitoring for pollutants in the adjacent stream environment during construction activities and to ensure Best Management Practices are working to minimize potential impacts.

### **Water Quality Studies/Storm Water Monitoring and Planning**

E2 has completed storm water monitoring for Total Maximum Daily Load (TMDL) compliance and for industrial site runoff compliance in accordance with Navy Region Hawaii's municipal separate storm sewer system (MS4) National Pollutant Discharge Elimination System (NPDES) permit annually since 2015. E2 has also completed or is completing several storm water investigations, assessments, and management projects for NAVFAC Hawaii as follows.

- **Storm Water Management Plan for Commander Navy Region Hawaii, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 prepared a Storm Water Management Plan (SWMP) for Commander Navy Region Hawaii in accordance with their National Pollutant Discharge Elimination System (NPDES) permit. The SWMP contained several program components including public education and outreach, illicit discharge detection and elimination, construction site runoff control, post construction storm water management, P2 and good housekeeping, storm water monitoring, and reporting. Storm Water Pollution Control Plans were developed for over 100 industrial facilities as part of the SWMP.
- **Storm Water Management Plan for Marine Corps Base Hawaii Kaneohe Bay, Oahu, Hawaii.** E2 prepared a Storm Water Management Plan (SWMP) for Marine Corps Base Hawaii Kaneohe Bay in accordance with their National Pollutant Discharge Elimination System (NPDES) permit. The SWMP contained several program components including, public education and outreach, illicit discharge detection and elimination, construction site runoff control, post construction storm water management, P2 and good housekeeping, storm water monitoring, and reporting. Storm Water Pollution Control Plans were developed for 25 industrial facilities as part of the SWMP.
- **Illicit Discharge Survey for Commander Navy Region Hawaii, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 completed an illicit discharge survey for non-storm water discharges to the Commander Navy Region Hawaii (CNRH) municipal separate storm sewer system (MS4) and waters of the United States of America. The survey was completed in accordance with the National Pollutant Discharge Elimination System (NPDES) permit issued to CNRH. The scope included the inspection of over 1,300 facilities located throughout Joint Base Pearl Harbor-Hickam. The inspections included an assessment of facility operations and work practices that may result in illicit discharges as well as inspections of the storm drain system during dry weather to determine if illicit connections are present. E2 completed the inspections and developed recommended corrective actions and associated preliminary cost estimates based on the survey findings.
- **Hickam Field Industrial Facility Inspections for Storm Water Compliance, Oahu, Hawaii.** E2 completed annual inspections of 38 industrial facilities located within 54 buildings at Hickam Field to determine if facility operations were in compliance with NPDES permit requirements. Facility managers were interviewed and facility inspections were completed in order to identify good housekeeping and best management practices (BMPs), the availability of spill response procedures and spill kits, existing erosion control measures, hazardous materials and hazardous wastes stored on site, material inventory, condition

and types of storage lockers and containers for hazardous materials and hazardous wastes, current industrial work activities and work practices, evidence of spills and/or leaks, evidence of dry weather flows and illicit connections, and condition of existing storm drain inlets. Deficiencies were noted and recommended corrective actions including additional BMPs were identified.

- **Total Maximum Daily Load Study Wahiawa Annex, Oahu, Hawaii.** E2 served as the principal investigator for a Total Maximum Daily Load (TMDL) study for Joint Base Pearl Harbor-Hickam (JBPHH)-Wahiawa Annex. This monitoring work was conducted to comply with the terms of National Pollutant Discharge Elimination System (NPDES) Permit for the Navy's municipal separate storm sewer system (MS4). Cutthroat flumes were installed at three areas where runoff exits the facility and flows towards Kaukonahua Stream to allow quantification of the volume of flow exiting the installation. Water quality monitoring of the runoff has been conducted for 2.5 years for Total Nitrogen and its components (ammonia, Kjeldahl nitrogen, and Nitrate/Nitrite as N), turbidity and Total Suspended Solids (TSS)). A predictive analytical model was developed for JBPHH-Wahiawa Annex that allows calculation of the daily nitrogen & turbidity loads exiting the facility towards Kaukonahua Stream using continuous rainfall data collected at the installation. This model will save the Navy money complying with the terms of their NPDES permit.

### **Potable Water Source, Treatment, and Distribution Assessments**

- **Lead in Drinking Water Testing at Priority Areas Joint Base Pearl Harbor-Hickam and Naval Computer and Telecommunications Area Master Station Pacific JBPHH and NCTAMS Pacific, Wahiawa, Oahu, Hawaii.** E2 conducted drinking water testing for lead as a protective measure at several priority areas and various schools and childcare facilities on Navy Installations. Quick turnaround times were required for sampling, laboratory analysis, and notifications. Initial site investigations were conducted to develop a comprehensive two-step sampling plan, in accordance with updated Navy directives and Environmental Protection Agency guidance. Field work involved multiple visits to each facility to prepare and sample over 700 drinking water outlets, conducted during evenings and weekends to minimize the impact on facility operations. Upon completion of the two-step sampling process, corrective actions were immediately developed and provided to the Navy. A Project Summary Report documented the work and findings.
- **Potable Water Master Plan for Commander Fleet Activities Okinawa for NAVFAC Pacific, Okinawa, Japan.** The Potable Water Master Plan (PWMP) consisted of an engineering evaluation of the condition, reliability, and quality of the installation's utility system, and the system's capability to meet present and future requirements. The Commander Fleet Activities Okinawa areas evaluated under this study included Camp Shields, White Beach, Awase Transmitter Site, and Tengan Pier. Field investigations were conducted at the facilities to verify water system components, review drawings, obtain water meter readings, and interview facility personnel. Pressure recorders were installed on select fire hydrants in the distribution system and fire hydrant flow tests were completed to obtain pressures at various locations in the distribution system to aid with the calibration of a computer model.
- **Water Efficiency Survey for the United States Army Corps of Engineers Honolulu Engineer District, Oahu, Hawaii.** The Water Efficiency Survey assessed 29 facilities within Fort Shafter and Fort Shafter Flats with the purpose of identifying water uses and potential water conservation options to meet the U.S. Army Garrison (USAG) Hawaii's sustainability goals. The surveyed facilities included office and industrial buildings, various community and activity centers, barracks, housing, the Hale 'Ikena restaurant, and the golf course. In addition to indoor fixtures, the scope of work included a landscape survey at Palm Circle and the golf course. The collected data were used to identify potential water savings, and repair and capital improvement projects that merit further consideration and exploration by USAG Hawaii. If implemented, the repair and capital improvement projects identified during the survey would result in water savings of approximately 9% annually or 16 million gallons per year with a resultant payback period of one year.

## **Air Quality and Monitoring Studies**

- **Ozone-Depleting Substances Inventory and Management Plan for Naval Air Facility Atsugi, Japan.** E2 updated the air source inventory to include all Ozone-Depleting Substances (ODS) containing units regulated or potentially regulated by the Japan Environmental Governing Standard (JEGS) and air emission sources (except ODS) that are regulated by the JEGS. Field work for the project was completed in 2017 and included verification of over 2,400 refrigerant and air emission sources at almost 230 facilities (70 additional facilities from the initial scope of work). Based on the results of the field work, E2 and HDR prepared an updated air source inventory database and maps of survey results, which were included in a Field work Summary Report. The field work findings were then used to update the ODS Management Plan (title changed to “Refrigerant Management Plan (RMP)”) to reflect revisions to applicable regulations. Responsibilities included preparation of the Work Plan, completion of field inspections, preparation of the updated air source inventory database and maps, Field work Summary Report, and quality assurance review of the RMP.
  
- **Long-Term Groundwater and Soil Vapor Monitoring Red Hill Bulk Fuel Storage Facility, Joint Base Pearl Harbor-Hickam, Oahu, Hawaii.** E2 completed groundwater monitoring and soil vapor monitoring at the Red Hill Bulk Fuel Storage Facility. E2 conducted quarterly LTM groundwater monitoring and sampling of ten wells located inside and in the vicinity of the Red Hill Bulk Fuel Storage Facility tunnels. E2 worked closely with the Navy to streamline the quarterly reports and conducted several informational meetings for the Navy regarding the interpretation of analytical data. E2 is currently conducting monthly soil vapor monitoring of 48 soil vapor probes within the tunnel and has conducted maintenance and upgrades to the system at no additional cost to the Navy. Quarterly groundwater monitoring reports were completed during the groundwater long term monitoring and monthly soil vapor reports are completed following each field event.

E2's civil engineering design experience includes the Design of Water Distribution, Transmission, and Treatment Systems, Design of Wastewater Collection, Treatment, and Disposal Systems, Design of Storm Drainage Collection and Disposal Systems. Example projects include the following.

- **Construction of the Pier 29 Container Yard, Honolulu, Oahu, Hawaii.** Construction improvements which included a new pavement structure were completed at Pier 29 to accommodate a new container yard. As a subconsultant to RMTC, E2 prepared design specifications for the handling of contaminated soil and groundwater to be encountered during the construction. Historic releases of petroleum products have led to contamination in both the soil and groundwater including the presence of free-floating products on the groundwater surface. E2 also prepared design specifications to address air monitoring during construction and the removal of abandoned fuel pipelines that may be encountered. E2 participated in coordination meetings with the Harbors Division and the IDPP. The project design team received a commendation letter from HDOT Harbors after the construction was completed.  
**\*COMMENDATION LETTER - EXCELLENT PERFORMANCE\***
- **Reconstruction/Replacement of Sewers, Ho'omaluhia Botanical Gardens, Kaneohe, Oahu, Hawaii.** Completed planning, design, and preparation of construction documents for the reconstruction/replacement of existing sewer lines. Phase I included the cleaning and inspection of CCTV in accordance with the Pipeline Assessment Certification Program. Phase II assessed the sewer line deficiencies from the CCTV data, developed rehabilitation/replacement alternatives for the system, prepared schematic, and concept drawings for the recommended alternatives, and prepared a cost estimate for the recommended improvements. Phase III, E2 is preparing construction documents.
- **Sand Island Wastewater Treatment Plant Site Assessment and Remedial Design, City and County of Honolulu.** E2 conducted a site investigation and Toxic Substances Control Act (TSCA) cleanup of contaminated soil. Responsibilities included overall project management, coordination of subconsultants, development of the technical approach for all environmental investigations and the remedial design and negotiating with the USEPA Region 9 and the State Department of Health (DOH) for all investigative and remedial activities. Supervised the preparation of the Phase I Environmental Site Assessment (ESA). Conducted and prepared the Phase II ESA, the Human Health Risk Assessment, the TSCA Notification Remediation Report, and the Soil Management Plan. Prepared construction plans and specifications and a construction cost estimate for the TSCA remediation. Performed services during construction including oversight and review of the TSCA cleanup. Coordinated the investigation and cleanup work for the two ongoing construction projects. Negotiated with the USEPA Region 9 and the State DOH throughout the duration of the project to allow construction to proceed concurrently with the investigation and cleanup. A follow-on remedial design including the completion of construction documents for the reuse of remaining low level PCB contaminated soil was completed for 76,000 cubic yards of stockpiled soil. Mr. Yamauchi served as the senior design engineer and designed a geofabric retaining wall system to contain the contaminated soil, which allowed for immediate future use of the site as a construction staging area.
- **Waianae Agriculture Park Drainage Improvements, Waianae, Oahu, Hawaii.** E2 completed the design of miscellaneous improvements to the drainage system at the Waianae Agricultural Park. The improvements included slope stabilization of drainage ways, diversion of runoff into an infiltration basin, design of overflow protection drainage intakes for the infiltration basin, and repairs to existing concrete drainage swales. Responsible for preparation of construction documents (i.e., plans and specifications) and services during bidding and construction. The construction plans were completed on an accelerated schedule to meet the funding requirements for construction.

E2 has conducted hydrogeological studies involving groundwater availability assessments for potable water systems and contaminant fate and transport within groundwater aquifers over the past years. Some of these projects are listed below.

- **Hydrogeological Study to Determine Impact of MILCON P-184 Reject Water, Diego Garcia, British Ocean Territory.** E2 conducted a hydrogeologic study to evaluate the potentially harmful impact to the water supply aquifer in the Cantonment Area on Diego Garcia resulting from the disposal of reject water created by the recently constructed nanofiltration plant.
- **Makua Valley Numerical Modeling Study, Makua, Oahu, Hawaii.** A surface water and groundwater modeling study was performed for the live firing range at Makua Valley. The simulation results were used to estimate future environmental impacts resulting from releases of munitions-related chemicals during live fire training exercises conducted by the Army within the range. Streamflow and groundwater data collected from wells and monitoring devices were used to calibrate the numerical groundwater (MODFLOW/MT3D/SEAWAT) and watershed runoff (GSSHA/WMS) models used. The simulation results were integrated into an EIS prepared for the firing range.
- **Numerical Modeling Study for Proposed Field Optimization Phase Injections.** E2 conducted a series of modeling simulations to evaluate the effects resulting from the injection of an oxidant (sodium persulfate) into a contaminated, shallow unconfined aquifer. The oxidant was being injected in order to induce the chemical breakdown of the dissolved phase contamination (predominately benzene) present at a former industrial property. The 2-D, finite difference BIOPLUME III model was used to simulate the degradation of benzene resulting from the injection of the oxidant compound into four injection wells screened in the shallow aquifer on the property over a one-week treatment period. The model was used to simulate the change in benzene concentration in the shallow aquifer over a six-month period after the oxidant was injected. The numerical simulation results were used to allay the concerns of surrounding property owners about the effect of the proposed remediation approach on the groundwater quality on adjacent properties.
- **Hoakalei Lagoon Groundwater Modeling Project, Ewa Plain, Oahu, Hawaii.** E2 conducted a hydrologic study to estimate the flux of groundwater entering a recently constructed lagoon located in the Ewa Plain of the island of Oahu. A density-dependent, numerical groundwater model (SEAWAT) was created for the area to estimate the groundwater influx rate into the lagoon. The model was calibrated using average water levels and recent vertical chloride concentration profile data measured in monitoring wells located in the vicinity of the lagoon. The model-derived groundwater flux data was combined with groundwater nutrient data to develop a maintenance program to limit the spread of an algal species, Chara spp. (muskgrass), within the lagoon while maintaining sufficient biomass of algae to maintain the good clarity and low overall nutrient levels present in the lagoon water.
- Additional scientific projects related to hydrology that E2 has previously conducted related to the movement, distribution, and management of water including the water cycle, water resources, and drainage basin sustainability are described below.
- **Investigation of Central Maui Landfill, Maui, Hawaii.** The purpose of the project involved analyzing the existing groundwater monitoring well network at the County of Maui Landfill (CML) and designing an improved monitoring network that is approved by the regulators at the State of Hawaii Department of Health (DOH). To accurately locate additional compliance monitoring wells at the facility, a two-month duration synoptic water level study was conducted on the existing network of monitoring wells as well as at the new water supply well. The tops of the existing compliance monitoring wells were resurveyed to allow delineation of the subtle gradient of the deep basal groundwater aquifer (~300 feet to water from the landfill surface) that underlies the CML. The overall direction and magnitude of the groundwater system underlying the landfill determined during the synoptic study were then used to design a compliance well

network for CML that effectively monitors potential landfill impact on the basal groundwater aquifer beneath the CML.

- **Hydrogeologic and Condition Assessment for Kokee and Kekaha Ditch Systems, Waimea, Kauai, Hawaii.** E2 collected physical inventory information and stream flow measurements for both ditch systems to assist the Commission on Water Resource Management (CWRM). Assisted the CWRM in the matter of the Complaint for Dispute Resolution and Complaint for Declaratory Order Against Waste in the Waimea River and its Tributaries filed by Earthjustice on behalf of Poai Wai Ola and the West Kauai Water shed alliance. E2 investigated and conducted fact-gathering work that included meetings with the parties pertaining to the complaint, conducting an inventory and assessment of the existing infrastructure of the Kokee and Kekaha Ditch Irrigation Systems, measuring and monitoring streamflow throughout both systems, assessing the existing uses of water from both systems and preparation of a comprehensive report describing the findings from these assessments to the Commission.
- **Waimanalo Wastewater Treatment Plant R-1 Reuse Feasibility Study, Waimanalo, Oahu, Hawaii.** A Feasibility Study was completed for the US Army Corps of Engineers and City and County of Honolulu to assess the technical, environmental, and economic feasibility of producing R-1 water at the Waimanalo WWTP for reuse in the Waimanalo community. The first component of the FS was a market survey that was completed to identify potential users in the community. The survey identified available potable and irrigation water sources; gauged interest from the potential users; gathered user concerns with R-1 water use; and identified potential R-1 water demands. The results of the market survey indicated strong interest in R-1 water reuse from the Olomana Golf Links, Waimanalo District Park, Waimanalo Beach Park, Honolulu Polo Club, and Waimanalo WWTP. A conceptual design for the first phase of improvements was completed and identified the WWTP improvements, the distribution system improvements, and the end user improvements.
- **Water Supply and Numerical Analysis of the Mahukona Aquifer System in Kohala, Hawaii.** A potable water source assessment was completed for the Mahukona aquifer system. A detailed, GIS-based water budget recharge analysis was performed for this aquifer system, located in an area undergoing rapid development. A 3-D, density-dependent numerical flow model (SEAWAT) was used to predict the increase in salinity within the aquifer that will result from the projected future increases in groundwater withdrawal from the aquifer system.
- **Groundwater Availability Assessment, Kawailoa, Oahu, Hawaii.** A potable water source assessment was completed for the 40.75-square mile Kawailoa property owned by Kamehameha Schools on the North Shore of Oahu. The groundwater availability for the area was determined by creating a GIS-based model that accounted for spatial variation in rainfall, evapotranspiration, irrigation, crop, and soil type, as well as the temporal variation in rainfall and evapotranspiration across the property.

E2 provides comprehensive services for planning studies and master plans. E2 has prepared environmental documents under NEPA, compliance with federal and state environmental laws and regulations, and has an understanding of Section 7 of the Endangered Species Act and Section 106 of the National Historic Preservation Act, Air Quality, Water Quality/Water Quality Permits, Benthic Communities, Biological Assessments, Essential Fish Habitat, Land Use, and Infrastructure.

E2 has direct significant experience in completing NEPA documentation and processes for Federal and State interests in Hawaii. E2 engineers and environmental professionals, along with specialty team members, provide substantial expertise in supporting natural and cultural resources assessments and consultations, with successful completion of agency/stakeholder interactions and detailed technical investigations, documentation, and formal clearance. The E2 team can also provide expertise in water resources planning and application of a systems approach, with representative project experience in Hawaii, Japan, and the United States.

- **Site Investigation at Former Molokai Electric Company and Galierher-Ono Parcels, Kaunakakai, Molokai, Hawaii.** E2 conducted a Site Investigation (SI) of the former Molokai Electric Company (MOECO) site in downtown Kaunakakai. The SI included a comprehensive study of residual near and subsurface contamination from previous MOECO activities, primarily from chemicals of concern polychlorinated biphenyls (PCBs), and petroleum and heavy metals. E2 collected over 700 discrete soil samples as well as 88 *MULTI INCREMENT*<sup>®</sup> (MI) soil samples, soil-gas, concrete and groundwater samples. In addition, E2 conducted a synoptic water level study in order to help determine potential migration of subsurface contaminants. Prior to completion of the field portion of the project, E2 completed two Special Management Area (SMA) permit applications for the County of Maui for the project. The results of the SI will be used to determine the most appropriate remedial action for the site. Responsibilities included Project Management, completion of the SMA permits, field oversight and coordination, drafting of the WP/SAP and a final report.
- **Puna Agricultural Park Feasibility Study and Phase I Environmental Site Assessment, Puna, Island of Hawaii, Hawaii.** E2 completed an Environmental Site Assessment (ESA) and prepared a Feasibility Study (FS) for the development of an agricultural park in Puna, Island of Hawaii. The three parcels at the site encompass a total land area of 5,845 acres. E2 reviewed the existing conditions and conducted a market survey to determine public interest in developing the agricultural park.
- **Remedial Investigation/Feasibility Study for Quarry Pit Landfill, Marine Corps Base Hawaii, Kaneohe, Oahu, Hawaii.** This project involved landfill and soil cover characterization using geophysical survey and intrusive verification methods; soil, groundwater, soil gas, and sediment investigation and sampling; and site assessment and characterization using discrete and *MULTI INCREMENT*<sup>®</sup> sampling as part of the Remedial Investigation/Feasibility Study process to evaluate future remedial alternatives. Identified historic land use, reviewed previous construction and environmental work, project design and planning, data management and evaluation, and prepared report

### **Ability to Meet Schedules**

Not all E2 personnel are currently being utilized full-time. E2 is actively pursuing new work and has the capacity to provide Environmental Engineering consulting services to the County of Hawaii. In addition, E2 has extensive partnering experience with several independent consultants (engineers, geologists, and field technicians) and subcontractors whom we can rely on to assist as needed with periodic work overloads, producing high-quality deliverables while under E2 management. E2 has an excellent history of meeting schedules within the allotted project constraints by submitting deliverables on time or in advance of client deadlines.

<b>DISCIPLINE</b>	<b>NAME OF FIRM</b>
Civil Engineering and Surveying	R.M. Towill Corporation
Surveying	ControlPoint Surveying, Inc.
Drilling Services	GeoTek Hawaii, Inc.
Civil Engineering	HDR, Inc.
Environmental Planning	HHF Planners
Waste Management, Environmental Construction	Pacific Commercial Services
Analytical Services	Eurofins, TestAmerica Laboratories, APPL, Inc., Torrent Laboratory, Inc., Enthalpy Analytical
Asbestos and Lead Paint Analytical Services	SGS Forensic Laboratories
Data Valuation	Laboratory Data Consultants, Inc.

## **Cost Control**

E2 is conscious of our role as stewards of our client's funds and is committed as partners to meeting the challenge of "doing the best with less". We control project costs through realistic cost estimating, competitive procurement of materials and services, developing and implementing innovative methods and design, and using cost accounting tools. Every project is approached in the following manner.

**Cost Estimating.** E2 cost estimating is done by senior staff with years of relevant experience. An accurate and realistic project cost estimate is a key component to controlling project budgets.

**Competitive Procurement.** E2 seeks competitive bids for procuring goods and services for subcontracted work. Whenever possible preferential consideration is given to small, small disadvantaged or women-owned small businesses.

**Cost Accounting Tools.** E2 is committed to a disciplined approach to controlling project costs and schedules using our fully automated, interactive, Intaact Project Management Information System (PMIS). PMIS integrates planning, scheduling, cost control, budgeting, and cost accounting.

**Value Engineering.** E2 approaches each project as a value engineering project, whether the value engineering is done informally with our in-house staff or formally utilizing the third-party process. Clients are assured that when alternatives are recommended, the recommendation is based on the collective wisdom of a team of experienced professionals.

## **Quality of Work**

E2 is committed to providing clients with quality service and work products. This is achieved through the implementation of a Quality Assurance/Quality Control (QA/QC) system by the Senior Management of the firm. E2's project planning process calls for the development of detailed project schedules that identify task and milestone completion dates and strict adherence to quality and cost control programs. Schedules are discussed and agreed upon by all parties involved with the project. Once schedules are in place, monitoring becomes the key responsibility of the project manager. Deviations from the schedule are assessed by the project manager and brought immediately to the client's attention.

The repeat work received from clients of E2 is the best indicator of success at controlling the quality of our projects. E2's QA/QC program consists of a series of reviews for every project within the firm. Mr. Aoki is responsible for overseeing this program and ensuring that the independent review is unbiased and utilizes Value Engineering techniques. These independent reviews are conducted at every submittal stage from concept to final design.

The following is a checklist utilized by our QA/QC managers:

**Compliance:** Assuring the design is in accordance with all applicable design standards, codes, environmental regulations, etc.

**Feasibility:** Assuring the investigation/design is feasible in accordance with the client's budget.

**Errors and Omissions:** Assuring the elimination of errors and omissions that could result in change orders and possible liability.

**Correctness and Clarity:** Assuring that plans and reports are clear and correct.

**Appearance:** Assuring that the plans and GIS maps are prepared in accordance with the drafting standards of the client and comply with their profession's standards.

Comments generated through our QA/QC program are discussed with the design team and incorporated into the plans and specifications and/or reports prior to submission to the client.

E2 has also established a QA/QC Manual for its contracts. The QA/QC Manual establishes the quality systems to be used on contracts. It also establishes the positions and personnel responsible for the implementation of the quality systems. The QA/QC Manual defines the lines of authority and the QA/QC personnel responsibilities. The QA/QC Manual outlines the QA/QC tasks to be implemented, provides QA/QC checklists and forms to be completed, and provides procedures for the implementation of corrective actions. The QA/QC Manual includes the following sections that identify the quality systems to be used: 1.) Introduction; 2.) Organization and Responsibilities; 3.) Quality Control Program Scope; 4.) Personnel Training and Qualifications; 5.) Procurement Control and Supplier-

Subcontractor Evaluation; 6.) Procedures, Instructions, Drawings and Technical Documents; 7.) Document Control; 8.) Chemical Sampling and Analysis Controls; 9.) Waste Management; 10.) Identification, Control, and Correction of Nonconforming Conditions; 11.) Records Management; 12.) Quality Audits and Surveillances

Examples of quality systems that will be implemented include:

- Fee Proposal Preparation – As mentioned in the key personnel section, fee proposals will be prepared by the Program Manager with assistance from the Technical Director, Senior Scientist, and other key Senior Project Managers who have the requisite project experience and technical knowledge to understand the various project complexities and develop a technical approach that will meet the project objectives and contract requirements. All fee proposals will be reviewed by the Technical Director or a Senior Project Manager who was not involved in the initial proposal preparation to provide an objective review. The Program Manager will then complete a second back-check prior to submittal.
- Planning Documents and Reports – All planning documents and report submittals will go through a three-phase review process. The first review will be by a Technical Editor. The second review will be by a Senior Project Manager not involved in the document preparation to provide an objective review. The third review will be by the Project Manager.
- Field Audits – Field audits may include Health and Safety audits by the Health and Safety Manager, and audits of field sampling procedures and field notes documentation by the Project Chemist, Senior Scientist, or QA Manager.
- Laboratory Analytical Data – E2 will utilize third-party data validation of laboratory analytical data when appropriate.
- Communications – Regular staff meetings will be conducted to discuss and improve the project procedures and communicate new procedures to be implemented and changes to contract requirements and regulations.

The QA Manager will be responsible for ensuring that the quality systems and procedures provided in the QA/QC Manual are followed. The Program Manager will assist the QA Manager by providing the necessary resources and staff to implement the QA/QC Program and providing the project staff with the resources and training required to accomplish their assigned duties.

### **Innovative Technologies**

E2 personnel have applied a wide array of innovative technologies and characterization tools to facilitate the cost-effective characterization and remediation of sites containing hazardous materials. E2 personnel used portable XRFs to delineate areas of elevated heavy metals contamination in a cost-effective manner in backyards of homes in agricultural areas on Kauai, in public parks and preschools on the Big Island, at a former military site in leeward Oahu, and at a high school in Central Oahu. E2 chemists have used immunoassay techniques to test soils and surfaces for PCB content at contaminated sites on the island of Oahu and in remote locations, including landfill sites on Kure Atoll and the island of Guam. The use of XRFs and immunoassay methods saved significant amounts of time and money during characterization and remediation work at multiple contaminated sites since the determination of the extent of contaminated soils can be determined instantaneously (in the case of metals contamination (XRF)) or within one day (in the case of PCB or pesticide contamination (immunoassay methods)). This rapid turn-around time in receiving information on the contamination levels at the site expedited the remediation work conducted at these sites. At Kure Atoll, E2 personnel developed a novel remediation approach for landfill soils that involved the introduction of native saprophytic fungi capable of degrading PCBs in soils. This technology was later used to in-situ remediate the interior of decommissioned military vessels that are currently mothballed in West Loch on the island of Oahu. E2 has also used a combination of abiotic and biological amendments to degrade PCBs in situ at landfill sites. At project sites contaminated with petroleum products, E2 has experience using bio-stimulation agents (RegenOx and PersulfOx™) to accelerate the degradation of fuel-related contamination in site soils and groundwater.

Most recently at Cocos Island in Guam, E2 is using Clean Sediment Technology with ecoSPEARS (Sorbent Polymer Extraction and Remediation System) technology. This is a transformative in-situ green cleanup system for polychlorinated biphenyls (PCBs), dioxins, PAHs, DDT, and other persistent toxins from contaminated sediment. ecoSPEARS is a truly sustainable approach using less water, energy, and emissions than traditional cleanup methods. ecoSPEARS is a plastic mat technology that is filled with their solvent and then inserted into a scalable

geosynthetic mat liner. The mat liners are then deployed down into the contaminated sediment where they act like a "sponge", passively absorbing PCBs from the sediment around it.

E2 personnel have worked with the State of Hawaii Department of Health (HDOH) Office of Hazard Evaluation and Emergency Response (HEER) to augment a new laboratory soil sub-sampling strategy (*MULTI INCREMENT*® sub-sampling) and have worked with HEER staff in the effort to utilize field instruments to obtain real-time defensible data. As a result of this collaboration, E2 personnel authored multiple papers (often with co-authors from the Hawaii Department of Health) on the use of increment sampling to characterize contaminated properties, to comply with 401/404 permitting requirements in offshore harbor waters, and for Applicable Monitoring and Assessment Plan (AMAP) monitoring of streams and waterbodies impacted by construction activities.

E2 personnel also pioneered innovative incremental sampling methodology techniques for the characterization of contamination in sediments present in streams and harbors. E2 recently hosted a webinar on contaminated sediment characterization for personnel from the EPA Office of Research and Development's Office of Science Policy and for consultants from around the nation.

---

## ENDORSEMENTS

---

E2 completed a study of the Wahiawa Irrigation System for the State of Hawaii Agribusiness Development Corporation (ADC). E2 was able to successfully coordinate with multiple government agencies and private stakeholders involved in the use of Lake Wilson and the irrigation system to investigate and identify the financial, legal, and environmental liabilities and responsibilities should ADC take ownership of the system. The study was completed within nine months and in time for ADC's board to evaluate their options before the next meeting of the State Legislature in 2008. A comprehensive presentation of the study was completed by E2 to the ADC board members. The presentation was covered by three of the four major local television stations. **A few hours after the presentation, E2 received an acknowledgment email from Mr. Alfredo Lee, Executive Director of ADC. The email stated "The board members really liked your presentation. Thanks for the good work."**

Two other projects that exemplify E2's excellent past performance was the Integrated Solid Waste Management Plan and Pollution Prevention Plan developed for the Commander Fleet Activities Sasebo (CFAS) through NAVFAC Pacific. Review comments received from the CFAS Project Lead, Mr. Frank Floros, on the two plans included: **"The plan (Integrated Solid Waste Management Plan) is excellent, concise and provides great attainable recommendations to improve the CFAS SW and Recycling Programs. CFAS appreciates your effort."**

Another example project that demonstrates E2's ability to deliver a quality work product on-time and within budget is the design of the Pier 29 Container Yard for the HDOT Harbors, Harbors Division. As a subconsultant to RMTTC, E2 prepared design specifications for the handling of contaminated soil and groundwater to be encountered during the construction of the new container yard. Historic releases of petroleum product have led to contamination in both the soil and groundwater at the site including the presence of free-floating product on the groundwater surface. In addition, E2 prepared specifications to address the removal of abandoned fuel pipelines and air monitoring during construction. E2 participated in coordination meetings with HDOT Harbors and the Iwilei District Participating Partners (IDPP), a stakeholder for the soil and groundwater contamination, to ensure effective communication and project acceptance by all parties involved. E2 also addressed comments by HDOH who reviewed the construction documents. The project team was able to meet the one year accelerated design schedule required to receive stimulus funds from the Federal government. The design team received a commendation letter from HDOT Harbors Division for "excellent performance" on the project including **"going beyond the contract with extensive coordination that was done for the handling of petroleum contaminated soils at the project site with the IDPP."**
