Hawaii notes

Start off with natural beauty sites and then you go to climate mitigation and then you wanna jump to climate adaption labeling something in urban character. Guidelines is not a place I wanna live urban character guidelines resort area for the industrial center urban neighborhood center rural neighborhood character guidelines, do you really think you're gonna tell people how they must have their yards if I own my property nobody's gonna tell me how it should look water system standards domestic consumption guidelines you guys are already doing that the golf courses and the chains hotels that are there their yards are green grass with no natural remedy growing on it

Indicators, collaborative, bio, cultural stewardship. I don't even like the way that sounds now this plan that I'm looking at. I'm just going through the table of contents. It sounds like you guys came up with this while you people thought you had power Over all the normal citizens of the world really you don't realize those days are changing and you're gonna lose your power.

What does the stakeholder have to do with me a resident of my own property? They should have nothing to do with it. So on 1.0 the introduction you have organizing funding for projects that align with the general vision and goals so is this why you will not give any money to the people in Hawaii who've murdered and taken their homes from and now you're trying to just take their land with giving them no money, you can't just take things and rearrange the constitution doesn't work like that. Ask anybody on a reservation is not a reservation not one island over there is a reservation. People need to stand up and speak.

I do not like this statement you're trying to spill out the preservation of our natural beauty and historical sites a system of principal thoroughfares highway streets and public access to the shoreline. Are you kidding me? Do you really think you're gonna go in? Tell everyone this is your little public access when their whole life the whole shoreline's been public access. I'll tell you right now. This is not gonna fly . I have a problem when I hear you guys say on such other matters that may in the council judgment permit, promote the general welfare and health and prosperity of its people. I want to know who the people on this council how they can think they can God you can't, so anything the council does should be voted on by the people and these people are gonna wake up you have not dumb down everybody

And it's funny how you state the Hawaii became a 50th state of the United States but that never really actually happened. They've been floating in limbo for years. That battle is still on today and the reason I believe you burned most of that heritage away. And I do realize this is public opinion. It's my opinion.

And now on 1.4 it's funny how you guys open up with respects the culture. If we respected the culture you wouldn't be tearing it apart like this going against every fabric that the culture has you trying to diminish and I'm not the only person who can see this . And when you say his strikes a balance among economic and social and community and environmental priorities, so the peoples priority is number one not the feelings or the notions of anybody on the council or the assumption of the council member feelings it's about the law.

And it's so funny when you put me the needs of the present without compromising the ability of the future generations to meet their own needs. Well you're doing that already by pricing

people at a Paradise you've been doing it for years and the price of the houses, although I would love to, I would not go there and buy a house and take something away from the people who already live there

When you say your vision is the ability to plan for the future with creative activity and wisdom in alignment with community values whose wisdom are you talking about surely not some person feeling on the committee is probably somebody who's not even educated in the field yeah, I said it

And I find it funny that you think that the multi module or modernized transportation network that provides a system for safe and efficient, comfortable movement for people and goods I think I can already do that with my own car or truck, caring around my own family members or friends or tourist That I can manage without any government or state interference we don't need to ride around on a little cute bus that you can't even hear that's gonna happen

Is this not talking about the slave trader what when you say a high-quality of life for residence is maintained when a regenerative visitor industry balances, the preservation of natural and cultural resources with responsible visitation it shouldn't even be that the only way they can survive is because of tourist why don't you just say that , these people should be able to have their own little business out of their own little yard in a community center selling their goods interference called a flea market we call it networking our goods don't get it twisted using all these words of community safe the community safe without you pumping your fear so pump your brakes remember this is public opinion and I am the public And I'm gonna say it like this. It's like you were trying to force the Hawaiian people to be the workers just for the tourists. Well, maybe the Hawaiian people don't want to be your little tour Director stand around and watch shitty people trampled the island yeah, I said it.

And even Wording that you say, the community gauge and engagement process must be inclusive to incorporate, diverse perspectives and developmental strategies You think you can turn everybody into your little they all wanna join this little club no they don't wanna join that little club. You're talking rainbows and pipe dreams when in reality they already had that before you destroyed it don't get that you destroyed what was already there now you're trying to rebuild it back a different way Not like it never does wish I was there in person to say some of these things

Once again on 2.0 you're spitting about stewardships and that the fundamental plan strives to cultivate cultivate a sense of place and connection to the environment you know once again they already had that before you burned it down and you murdered all those people that environment already existed so don't try to come here and act like you're putting together something that has never been happened because it was there and you destroyed it you and your committee and all your little friends Let that sit in for a minute was any of your relatives I'll tell you what right now this little general plan that you have it sucks and it's not even gonna fly it. It needs to be scrapped and totally dismantled and thought and come around back to reality as we speak some of the richest people on the planet are being taken down.

Companies are being lost. CEOs are being, surrounded by SWAT houses are being rated so you might want to rethink the possibilities of a money pole here it just might not happen And you know, as being a person of we the people we know that this scam called the climate change is all driven by corporate chemical companies to pollute this guy using harp and the weapon do you're familiar with this to set a blaze and try to forward your scamming plan And I will say we the people are so aware of the murderous attack you had on Hawaiian citizens and their housing structures, their livelihoods taken from them and even you murdered a bunch of people too. You need to pay the people what you owe them and you need to let people back to their land so they can build their house and stop playing this Chemical game the gig is up the world knows what's going on in Hawaii cause you see I'm not from Hawaii, but I did make a special trip there to visit to see for myself the hotel stay because I am in a

wheelchair was disgusting. The land was too manicured don't step on the grass And then right down the street there's no water at all and then I drive around and I ate everything local. I didn't go to your block chain, restaurants, and what I saw was a takeover of corporations thinking they can just come in and bully pay off a mayor or a governor and then you know things kinda go your way if you pay a lot of people a lot of favors, those are over they're over. You know what I believe I believe the people who live on the island what they say they grew up there they know what's up and corporations. You're paid to lie to me and I know not to believe you at all. Just thought I'd throw that out there today. And it's so funny because over here on the mainland they talk. Oh it's his place is flooding. We need to not have it but yet a corporation go in there with a hotel and splatter a bunch of stuff around and hog up all that land but yet they're not worried about getting flooded. What's that about, make that make sense

And I'm even gonna say this, I know there's a lot of smart people on the island that went to college and all different backgrounds because they all have jobs and companies, and there are successful before the government went over there and started tin around the system, infiltrating the honesty of the island And simply letting people like disgusting nasty people buy up too much land for one person and there's a few of those spread throughout the islands are any of those famous people contributing money into the right pocket of the island? Yeah I hear crickets too. And why would you have to partner with community groups so they can raise the money to do your dirty work that's exactly what it sounds like to me. I'm not buying. Now at the time when I came over to Hawaii and stayed and traveled around and seen what I saw you need to give this island back to the people. Karma knows you do you not get that. And when you start 3.1 encourage all over conservation ethic in the use of Hawaii's resources if we're gonna talk ETHICS then I think you're trying to talk out the side of your neck and who are you gonna educate when you say on 3.2 you're gonna foster educational activities that promote the importance and value of Hawaii's, unique and limited environmental resources are you gonna take the bus over to the golf course and show them how much water they're wasting and then take that said to us to the hotel grounds that are perfectly manicured for the people who sleep in the hotel room we could do without the people we could do without that why don't we just have a lot around the hotel will come and pay to stay

Why do you little panel people think that you are judge and jury when you say incorporating indigenous and contemporary knowledge and practices to maintain environmental quality at its highest standards, addressing a changing climate, protect natural resources, restore ecosystem health for the benefit of the present and future generations, but you just destroyed a town of people And you won't let them go back to their property and you've left them homeless you've murdered their relatives and now you're trying to claim the land for your own and then you say on 3.5 promote resource management that is sustainable, responsible and data driven this sounds like a live experiment and I assure you Hawaii is not the experiment that you want to have karma knows your name everybody on this committee karma knows you and I will say karma. This is the panel.

Once again, I'm chuck Because you have Requires input and participation from the cute the community regarding daily activities, development of policies and programs and review of proposed projects, but are you really gonna sit and listen to the community when they say they don't want that garbage they said they don't want it they/ wanna go back to their property and build so who is on panel? They don't need to do that there is a consequence treason you know . OK 3.11 partner with government, private and nonprofit agencies, communities and other stakeholders why would you aid in the programmatic education concerning historical sites? I think the people who live on the island they know about the real truth about these historical sites and from what I know the government will take the twisted truth & the white man will change narrative to better their people and I'm an American so I know about this.

This is why I'm speaking because you're treating these people as you would treat myself if I was in the same situation.

On four point A seek private and public partnerships to maintain and steward the preservation of sites buildings and objects and landscapes of significant culture in history historical importance now if I have private land, that is historically in my family that has nothing to do with the government and I think That the government just tried to take over the history of the Lahaina people trying to rewrite history. It's not gonna happen. There's a lot of people in Hawaii who know the truth. Those are the people I listen to/ not some government mouthpiece. And I myself on my own property and I find it ridiculous that you make us pay property taxes on property. I already own. There's no reason that I should be paying anybody a piece of my property to be where I'm at those laws need to be changed worldwide I will not share Coexist or ask permission from any government or person to live my life my way this is a lot of the people and I think there's been a lot of human rights being trampled over right here in this whole process and then we're not even touching laws. You are trying to change willy-nilly or make up or, just think you can get by with what you want to do somehow I don't think this is all gonna happen the way you plan because life is unexpected and we are not a playbook. The government has a playbook they like to burn flood user to do use harp use, sir, use Gwen and all the cameras that they can use well we have cameras too, and we have microphones too, and we are here to record everything. The government does. I'm a cloud watcher. I see what the government doing in my space. I will do everything in my power of my life to stop with the government trying to do I will counter that action with my own. OK so since what I just said about provide real property tax initiative for historic properties, including commercial properties, so how much money do you plan on making off the area in Lahaina that you decimated and murdered those people for that land? How much are you gonna make on that, or you thought you were gonna make on that because the people are gonna get their land back plan is going to fail because there's no there's no substance to what you guys are saying in this plan there's a lot of assuming there's a lot of wordsmithing here and then there's a lot of things that are so vague. You don't even know what they're saying because it opens the door for wide interpretation and we the people are not that stupid, I know you think we're dumb down but there's a lot that are so that you will not like the truth spitting at you. I'm spitting at you and I don't even live there where I live. I live without permission from anyone this is what people need to do live life And tell people what you really think stop being shy and everyone in Hawaii needs to that's around this area need to go to these meetings does anybody know about EMF protection and the things that you can do because it in this point anyone in the audience I'm not talking to the panel Listening to this needs to go and get yourself set up with EMF protection. Figure it out look it up about it and know that is a wave of the future. The government doesn't want to tell you how to combat what they're doing to you but I will protect yourself, your family, and your property And the natural beauty sites it sounds just like you're using Hawaii for a MoneyGram because when you're talking about all the beautiful sites in Hawaii, they've always been beautiful without government help the people of Hawaii know how to take care of their land, but the government keep bringing the drugs in

OK now we're in 3.1 are you guys are trying to bully everybody's mind about climate change now we know that you guys have the direct energy weapon right there on the island we know the other weapons you have right there on the island and they're performed by the military Which you know kind of just bullies their way into every country and every good place on America because they're either there to steal someone's energy, steal somebody's minerals or steal somebody's agriculture that's kind of America the illuminati and all the Colts that is the Democratic Party nowadays now we're over here at 3.1 and it's so funny how you guys say that human induced climate change is resulting in global warming you know that is such a

crock of lies thrown into a petri dish that I've ever heard the government military, and the private corporations who are spreading the chemicals around the planet are responsible for the weather anomalies happening during program storms program hailed events program ice nucleation program overheating program, dry clouds, and we can keep going on for a long time. The people know the people know. so my question is to you what are you gonna do little committee people the ones with your little feelings intact? What are you gonna do for the housing that was in Lahaina that got burned down and people murdered by your little system what are you gonna do fix the water situation for your future build? What are you gonna do, just throw a bunch of dirt over and cover up and pretend it never happened. Slapped the Hawaiian people in the face. I don't think so committee people need to rethink what you're doing because your plan is gonna fail because when Donald Trump gets into the office it's not gonna be, the pedophile sector in charge anymore it's a new day. It's a new year. It's a new time and those low frequency. People will be left behind or they will be gone and the people that are woke with a higher frequency. We are the people in charge I'm so glad this is my own little testimony because you need to hear from real people, not paid suits

So really after everything I've seen this whole plan needs to be scrapped. It makes really no sense. Vague leaves open for interpretation and there's too much outside control. When you say you're gonna talk with the people it means the peoples voices need to be heard and not ignored well I thank you for listening, I might be a little long-winded, but I don't care .
