I'm writing to address a major concern about certain assumptions that are stated and that much of the plan is based on but are problematic at best, but worse are perhaps outright false and misleading.

My issues today are the presumption that we mean the same thing when we discuss "sustainability" and that we agree about "climate change" and its inherent presumptions especially that co2 is a polutant, that man is the largest cause of this climate change (by breathing and burning of fossil fuels etc). Several points on this:

1. When Al Gore popularized that we were going to be extinct by the year 2000 he used the term "global warming". Now we talk about "climate change"! To make a crisis out of "climate change" is circular logic and deceptive at its core. If it gets warmer it's a crisis. If it gets colder it's a crisis and the presumption carry's that it's man's fault by exhaling co2.

Simply existing and breathing is problematic and justifies open conversation about efforts to reduce the population! We used to think that it was immoral to plot ways to reduce population because of the sacredness of life now it's normal every day conversation.

2. Many of the thousands of intelligent people who have debunked these presumptions point out that to blame humans for the changes in climate ignores major factors that have massive influence on weather and climate - two of which are solar activity (proximity and intensity of the sun and its changing position and intensity over time) and the irrefutable fact of man's manipulation of weather.

Please educate yourselves if this challenge is new to you as this general plan assumes that these arguements are settled and closed in favor of a deceptive and destructive worldview.

Here are a couple of sites that are loaded with irrefutable proof of man's preoccupation not only with modifying the weather but weaponizing it using technologies that are being pushed strongly in our own neighborhoods right now.

A. [Weathermodificationhistory.com](#). Well written summaries of the history of weather modification since 1946 and tremendous resources to patents, DOD publications, public hearings before congress in 2015 that addresses Chem trails and creation of high altitude clouds etc.

B. [Geoengineeringwatch.org](#). Site loaded with information on the topic, soil samples water samples, air samples that show the aluminum, barium and strontium aerosolized metals affecting the air we breathe, the water we drink and the soil in which we raise our crops and feed our animals. Well done site with enormous amounts of data assembled by a retired engineer.

C. [Library.NOAA.gov](#) - this site shows those who REPORT their weather modification activities... the most impactive ones that we see in the news are NOT voluntarily listed! A few minutes here will show how common and readily available information is of man's manipulation of weather. It's not all evil... but some of it absolutely is and you see it on the news every month.

The world meteorological organization reports at least 50 countries are regularly using weather modification technologies. Russia and China and the US have all made public statements of their ability to use weather weapons in warfare.

The technologies involve sending the atmosphere with aerosolized chemicals that then can be influence by land based frequencies to create, amplify and steer weather - hurricane, tornados,

earthquakes that create tsunamis, cyclones, manipulation of the jet stream, blocking of the sun. Spend some time on these sites and you will likely conclude that in this conversation the same parties offering a solution consisting of more restrictions on land use, travel, greater taxation to fund the solutions etc are the same parties creating the problem. Problem, reaction, solution - and the peoples' liberty and prosperity pay the price of a "more government" solution. As to technology being aggressively disseminated in our neighborhoods today... can anyone think of a technology that we all use that functions by the projection of frequencies through the air in order for our communications to function? Coincidence that some of the best and oldest research on 2.4 ghz (the frequencies our cell phones and Wi-Fi function on are Russian studies in the 1940s about frequency weapons? Look it up. France doesn't allow cell towers in residential areas - we put them in our schools And church parking lots. You may find that there is a disturbing, undeniable connection between 5g (and other frequencies) and harm to biology as well as being effective in affecting weather.

I wholeheartedly reject what I believe are inaccurate and deceptive agendas based on half truths that are lumped into this idea of sustainability.

I'm interested in a general plan that:

1. Honors our constitution
2. Recognizes the sovereignty of the individual and the sacredness of land stewardship. The people are the rulers, land belongs to people not corporations and governments pretending to be for the people but are really about controlling resources to control people not empower them.
3. Acknowledges that people take care of people and solve problems, not Beurocrats, lawyers and politicians. Innovation and liberty are sacred concepts that are inherent in the people.
4. Recognizes that we are all trustees of what the Creator has loaned us and that we all are accountable for what we leave future generations.

Mahalo for your attention and for doing your own studies on the sites I've listed and others. I believe just an hour on either of the two sites I mentioned will convince that much of what's being heralded as evidence of "climate change" is indeed, but it's "man-made" - not because we breathe or burn fossil fuels but because a few are using technology as often happens to manipulate, control and harm. These few hope that we will react emotionally to half truths and buy into a solution that leaves we the people poorer and even less free. As WEF leader Klaus Schwab likes to say "you will own nothing, and you will be happy".

I pray that our Island m, our county leads the way in liberty, in pursuit of truth, in faithfulness to our Constitution and Bill of Rights and is indeed a land "perpetuated in righteousness"
